

CURRICULUM AND SYLLABUS
of
M.Sc. APPLIED CHEMISTRY - PHARMACEUTICAL
(PG CREDIT SEMESTER SYSTEM)

INTRODUCED FROM 2020-21 ADMISSION ONWARDS

BOARD OF STUDIES IN CHEMISTRY
SACRED HEART COLLEGE (AUTONOMOUS), THEVARA,
KOCHI, KERALA

PREFACE

I am greatly privileged in presenting the revised curricula and syllabi of M.Sc. Chemistry and MSc Pharmaceutical Chemistry for the approval of Faculty, Board of Studies and Academic Council of Sacred heart College (Autonomous)Thevara.

Chemistry is beyond the science of mere observation and understanding of nature. In the words of James Watson, a 1962 Nobel Laureate in Physiology or Medicine, put it well: “Life is simply a matter of chemistry”. It is with this vision we revised the syllabi for the PG courses, and also we followed the PG Guidelines which was prepared by the dean faculty. The revised syllabi will be implemented with effect from the academic year 2020-21 admission onwards.

The PG Board of Studies in Chemistry was entrusted with the duty of preparing the revised curricula and syllabi for the two M.Sc. Programmes in Chemistry currently approved by the Mahatma Gandhi University. The BoS has taken keen interest in collecting expert opinion from the renowned experts in the field as well as from the faculties of the affiliated colleges handling the subjects. We have also referred to the syllabi of various other Universities such as that of Cochin University of Science and Technology, Calicut University, Pune University, Delhi University besides, that of University Grants Commission and offered in the affiliated colleges.

The BoS prepared draft proposals of revised curricula and syllabi for the two M.Sc. Programmes in Chemistry keeping the Credit and Semester System. The syllabus has been set with an objective of training the students in all the fundamentals of the subject along with good practical exposure. Most of the advanced topics have been incorporated in the fourth semester. In view of creating research aptitude in students, BoS has decided to give sufficient time for project work, at least three months, and as far as possible send the students in reputed research centres/Universities in and outside the state for doing their project. Since specific time is not allotted for project work in the academic calendar, students can go for project after their final semester examinations.

The BoS feels that appreciable updating could be done in keeping with the current developments and trends in chemistry education. The task of preparing the Curricula and Syllabi and bringing it out in the present form was not a simple task but it was possible with dedicated efforts and wholehearted support and involvement of all the members of the faculty and BoS. I would like to express my sincere thanks to all my fellow members of the BOS and faculty for all their whole hearted time-bound help, cooperation and encouragement. I also express my sincere gratitude to Prof. S. Suganan (CUSAT), Prof.(Rtd.) K. K Vijayan (Calicut University), Prof. Abraham Joseph (Calicut University), Dr. M. K Muraleedharan Nair (Maharajas College), Dr. Mahesh Hariharan (IISER – TVM) and Dr. Pramod Padmanabhan (IISER – Pune) for their meaningful contributions.

Dr. V. S. Sebastian

Chairman

PG & UG Board of Studies

Sacred Heart College (Autonomous). Thevara.

BOARD OF STUDIES IN CHEMISTRY
Sacred Heart College (Autonomous)
Thevara, Kochi, Kerala

Sl. No.	Name & Address	Designation / Category
1	Dr. V. S. Sebastian HoD Chemistry Sacred Heart College, Thevara.	<i>Chairman</i>
2	Dr. Reji Varghese Assistant professor, School of Chemistry, IISER-Thiruvananthapuram	<i>Expert in the subject from outside the college, nominated by the academic council.</i>
3	Dr. Sreesha Sasi Assistant professor Department of Chemistry Maharajas College, Ernakulam	<i>Expert in the subject from outside the college, nominated by the academic council.</i>
4		<i>Expert to be nominated by the Vice Chancellor from a panel of six recommended by the College Principal</i>
5	Mr. Josan P.D. General Manager-Health Ingredients & Nutrition Section, Synthite Industries Ltd., Kolencherry, Ernakulam	<i>One post graduate meritorious alumnus nominated by the Principal</i>
6	Dr. Kochubaby Manjooran, Manager, Energy and Environment Division, Kochi Refineries Ltd., Ambalamukal, Ernakulam Dist.	<i>Representative from industry, corporate – sector or allied area.</i>
7	Dr. Jorphin Joseph Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
8	Dr. Franklin John Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
9	Dr. Jinu George Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
10	Dr. Grace Thomas Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>

11	Dr. Ignatious Abraham Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
12	Dr. Midhun Dominic C. D. Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
13	Mr. Senju Devassykutty Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
14	Dr. June Cyriac Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
15	Dr. Ramakrishnan S Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>
16	Dr. Abi T.G. Assistant Professor Sacred Heart College, Thevara.	<i>Faculty member</i>

TABLE OF CONTENTS

<i>Sl. No.</i>	<i>Title</i>	<i>Page No.</i>
1.	Preface	5
2.	Curriculum	6
3.	Grievance Redressal Mechanism	20
4.	Syllabus of Core Courses	21
5.	Syllabus of Complementary Courses	66
6.	Pattern of Question Papers	83

Programme outcomes for the Postgraduate students of Sacred Heart College, Kochi

At the end of the programme,

PO 1	Exercise their critical thinking in creating new knowledge leading to innovation, entrepreneurship and employability.
PO 2	Effectively communicate the knowledge of their study and research in their respective disciplines to their stakeholders and to the society at large.
PO 3	Make choices based on the values upheld by the institution, and have the readiness and know-how to preserve the environment and work towards sustainable growth and development.
PO 4	Develop an ethical view of life and have a broader (global) perspective transcending the provincial outlook.
PO 5	Explore new knowledge independently for the development of the nation and the world and are able to engage in a lifelong learning process.

Programme Specific Outcomes of MSc Applied Chemistry

At the end of M.Sc. Applied Chemistry Programme, the student should be able to:

<i>Knowledge and Understanding</i>	
PSO1	Demonstrate an in-depth knowledge and understanding of the principles of Inorganic, Organic, Physical Theoretical and Pharmaceutical Chemistry.
PSO2	Demonstrate an awareness of the relevance of chemistry in a wider multi-disciplinary context.
<i>Intellectual Abilities</i>	
PSO3	Apply their understanding in Chemistry to design solutions to unfamiliar problems in Chemistry and those involving other related disciplines.
PSO4	Use their knowledge and understanding to conceptualize appropriate models and representations.
<i>Practical Skills</i>	
PSO5	Design and conduct analytical, modelling and experimental investigations in Inorganic, Organic, Physical Theoretical and Pharmaceutical Chemistry.
<i>Professional Skills</i>	
PSO6	Ability to identify, design and conduct appropriate experiments, interpret data obtained, draw pertinent conclusions and communicate all these effectively.

General Information

1. SCOPE

1.1 These regulations provided herein shall apply to all post-graduate programmes, conducted by Sacred Heart College (S.H. College), Thevara with effect from the academic year 2020-2021 admission onwards.

2. DEFINITIONS

2.1 ‘**Academic Committee**’ means the Committee constituted by the principal under this regulation to monitor the running of the Post-Graduate programmes under the Choice Based Credit System (CBCS-PG).

2.2 ‘**Programme**’ means the entire course of study and examinations.

2.3 ‘**Duration of Programme**’ means the period of time required for the conduct of the programme. The duration of post-graduate programme shall be of 4 semesters.

2.4 ‘**Semester**’ means a term consisting of a minimum of 90 working days, inclusive of examination, distributed over a minimum of 18 weeks of 5 working days, each with 5 contact hours of one hour duration

2.5 ‘**Course**’ means a segment of subject matter to be covered in a semester. Each Course is to be designed variously under lectures / tutorials / laboratory or fieldwork / study tour / seminar / project / practical training / assignments/evaluation etc., to meet effective teaching and learning needs.

2.6 ‘**Credit**’ (Cr) of a course is the numerical value assigned to a paper according to the relative importance of the content of the syllabus of the programme.

2.7 ‘**Programme Credit**’ means the total credit of the PG Programmes, ie; **80 credits**.

2.8 ‘**Programme Core course**’ Programme Core course means a course that the student admitted to a particular programme must successfully complete to receive the Degree and which cannot be substituted by any other course.

2.9 ‘**Programme Elective course**’ Programme Elective course means a course, which can be chosen from a list of electives and a minimum number of courses is required to complete the programme.

2.10 ‘**Programme Project**’ Programme Project means a regular project work with stated credits on which the student undergo a project under the supervision of a teacher in the parent department / any appropriate Institute in order to submit a dissertation on the project work as specified.

- 2.11 'Plagiarism'** Plagiarism is the unreferenced use of other authors' material in dissertations and is a serious academic offence.
- 2.12 'Tutorial'** Tutorial means a class to provide an opportunity to interact with students at their individual level to identify the strength and weakness of individual students.
- 2.13 'Seminar'** seminar means a lecture expected to train the student in self-study, collection of relevant matter from the books and Internet resources, editing, document writing, typing and presentation.
- 2.14 'Evaluation'** means every course shall be evaluated by 25% internal assessment and 75% external assessment.
- 2.15 'Repeat course'** is a course that is repeated by a student for having failed in that course in an earlier registration.
- 2.16 'Audit Course'** is a course for which no credits are awarded.
- 2.17 'Department'** means any teaching Department offering a course of study approved by the college / Institute as per the Act or Statute of the University.
- 2.18 'Parent Department'** means the Department which offers a particular Post graduate programme.
- 2.19 'Department Council'** means the body of all teachers of a Department in a College.
- 2.20 'Faculty Advisor'** is a teacher nominated by a Department Council to coordinate the continuous evaluation and other academic activities undertaken in the Department.
- 2.21 'College Co-ordinator'** means a teacher from the college nominated by the College Council to look into the matters relating to CBCS-PG System
- 2.22 'Letter Grade'** or simply '**Grade**' in a course is a letter symbol (S, A, B, C, D, etc.) which indicates the broad level of performance of a student in a course.
- 2.23** Each letter grade is assigned a '**Grade point**' (GP) which is an integer indicating the numerical equivalent of the broad level of performance of a student in a course.
- 2.24 'Credit point'** (CP) of a course is the value obtained by multiplying the grade point (GP) by the Credit (Cr) of the course $CP = GP \times Cr$.
- 2.25 'Extra credits'** are additional credits awarded to a student over and above the minimum credits required for a programme for achievements in co-curricular activities carried out outside the regular class hours as directed by the College/ department.
- 2.26 'Semester Grade point average'** (SGPA) is the value obtained by dividing the sum of credit points (CP) obtained by a student in the various courses taken in a semester by the

total number of credits taken by him/her in that semester . The grade points shall be rounded off to two decimal places. SGPA determines the overall performance of a student at the end of a semester.

2.27 ‘Cumulative Grade Point Average’ (CGPA) is the value obtained by dividing the sum of credit points in all the courses taken by the student for the entire programme by the total number of credits and shall be rounded off to two decimal places.

2.28 ‘Grace Marks’ means marks awarded to course/s, as per the orders issued by the college from time to time, in recognition of meritorious achievements in NCC/NSS/Sports/Arts and cultural activities.

2.29 ‘Words and expressions’ used and not defined in this regulation but defined in the Mahatma Gandhi University Act and Statutes shall have the meaning assigned to them in the Act and Statute.

3. ACADEMIC COMMITTEE

3.1 There shall be an Academic Committee constituted by the principal to manage and monitor the working of (CBCS-PG) 2020.

3.2 The Committee consists of

- (a) The principal
- (b) The vice principal
- (c) Deans of the faculties of science, arts and commerce
- (d) The Controller of Examinations
- (e) IQAC –Co-ordinator
- (f) The superintendent of the college

4. PROGRAMME STRUCTURE

4.1 Students shall be admitted into post graduate programmes under the various faculties.

4.2 The programme shall include two types of courses, Program Core (C) courses and Program Elective (E) Courses. There shall be a Program Project (D) with dissertation to be undertaken by all students. The Programme will also include assignments, seminars, practical (P), viva (V), study tour etc., if they are specified in the Curriculum

4.3 There shall be various groups of four Programme Elective courses for a programme such as Group A, Group B etc. for the choice of students subject to the availability of faculty and infrastructure in the institution and the selected group shall be the subject of specialization of the programme.

4.4 Project work

- 4.4.1** Project work shall be completed by working outside the regular teaching hours.
- 4.4.2** Project work shall be carried out under the supervision of a teacher in the concerned department.
- 4.4.3.** A candidate may, however, in certain cases be permitted to work on the project in an industrial / Research Organization/ Institute on the recommendation of the Supervisor.
- 4.4.4** There should be an internal assessment and external assessment for the project work in the ratio 1:3
- 4.4.5** The external evaluation of the Project work is followed by presentation of work including dissertation and Viva-Voce.
- 4.4.6** The mark and credit with grade awarded for the program project should be entered in the grade card issued by the college.
- 4.5. Assignments:** Every student shall submit one assignment as an internal component for every course.
- 4.6 Seminar Lecture:** Every PG student may deliver one seminar lecture as an internal component for every course. The seminar lecture is expected to train the student in self-study, collection of relevant matter from the books and Internet resources, editing, document writing, typing and presentation.
- 4.7** Every student shall undergo **two class tests** as an internal component for every course.
- 4.8** The attendance of students for each course shall be another component of internal assessment.
- 4.9** Comprehensive Viva-voce shall be conducted at the end of the programme which covers questions from all courses in the programme as per the syllabus.

5. ATTENDANCE

- 5.1** The minimum requirement of aggregate attendance during a semester for appearing the end semester examination shall be 75%. Condonation of shortage of attendance to a maximum of 10 days in a semester subject to a maximum of two times during the whole period of Post Graduate programme may be granted by the College as forwarded on the recommendation by the class teacher/HOD.
- 5.2** If a student represents the college in University, State or Nation in Sports, NCC, NSS or Cultural or any other officially sponsored activities such as College union / University union activities, he/she shall be eligible to claim the attendance for the actual number of days participated subject to a maximum of 10 days in a Semester based on the specific

recommendations of the Head of the concerned Department and Principal of the College.

5.3 A student who does not satisfy the requirements of attendance shall not be permitted to take the end Semester examinations.

5.4 Those students who are not eligible even with condonation of shortage of attendance shall repeat the course along with the next batch

6. BOARD OF STUDIES AND COURSES.

6.1 The Board of Studies concerned shall design all the courses offered in the PG programme. The Boards shall design and introduce new courses, modify or re-design existing courses and replace any existing courses with new/modified courses to facilitate better exposures and training for the students.

6.2 The syllabus of a course shall include the title of the course, contact hours, the number of credits and reference materials.

6.3 Each course shall have an alpha numeric code number which includes abbreviation of the subject in two letters, the semester number, the code of the course and the serial number of the course ('C' for Program Core course, 'E' for Program Elective course, 'O' for Open Elective course, 'P' for Practical and 'D' for Project/ Dissertation and 'V' for Comprehensive Viva voce).

6.4 Every Programme conducted under Choice Based Credit System shall be monitored by Academic committee and the College Council.

7. REGISTRATION.

7.1 A student shall be permitted to register for the programme at the time of admission. The duration of the PG Programme shall be 4 semesters.

7.2 A student who registered for the course shall complete the course within a period of 8 continuous semesters from the date of commencement of the programme.

8. ADMISSION

8.1 The admission to all PG programmes shall be as per the rules and regulations of the college.

8.2 The eligibility criteria for admission shall be as announced by the college from time to time.

8.3 There shall be provision for inter collegiate and inter University transfer within a period of two weeks from the date of commencement of the semester.

8.4 There shall be provision for credit transfer subject to the conditions specified by the Board of

Studies concerned.

9. ADMISSION REQUIREMENTS

- 9.1 Candidates for admission to the first semester of the PG programme through CBCS shall be required to have passed an appropriate Degree Examination of Mahatma Gandhi University as specified or any other examination of any recognized University or authority accepted by the Academic council of the college as equivalent thereto.
- 9.2 The candidate must forward the enrolment form to the Controller of Examinations of the college through the Head of the Department.
- 9.3 The candidate has to register all the courses prescribed for the particular semester. Cancellation of registration is applicable only when the request is made within two weeks from the time of admission.
- 9.4 Students admitted under this programme are governed by the Regulations in force.

10. PROMOTION: A student who registers for the end semester examination shall be promoted to the next semester

11. EXAMINATIONS

- 11.1 There shall be an external examination at the end of each semester.
- 11.2 The answers must be written in **English** except for those coming under Faculty of languages.
- 11.3 Practical examinations shall be conducted by the college at the end of the semesters as per the syllabus.
- 11.4 Project evaluation and Comprehensive Viva -Voce shall be conducted as per the syllabus. Practical examination, Project evaluation and Comprehensive Viva-Voce shall be conducted by two external examiners.(For professional courses, one examiner can be opted from the same college itself)
- 11.5 There shall be one end-semester examination of 3 hours duration in each lecture based course (Theory).
- 11.6 A question paper may contain multiple choice /objective type, short answer type/annotation, short essay type questions/problems and long essay type questions. Different types of questions shall have different marks, but a general pattern may be followed by the Board of

Studies.

12. EVALUATION AND GRADING

12.1 Evaluation: The evaluation scheme for each course shall contain two parts; (a) internal evaluation (ISA) and (b) end semester evaluation (ESA). 25 marks shall be given to internal evaluation and 75 marks to external evaluation so that the ratio between internal and external mark is 1:3. Both internal and external evaluation shall be carried out in mark system. Both internal and external marks are to be mathematically rounded to the nearest integer.

12.2 Internal evaluation: The internal evaluation shall be based on predetermined transparent system involving periodic written tests, assignments, seminars/viva/field survey and attendance in respect of theory courses and based on written tests, lab skill/records/viva and attendance in respect of practical courses. The marks assigned to various components for internal evaluation is as follows.

12.3 Components of Internal Evaluation

All the components of the internal evaluation are mandatory

a) For Theory

	Components	Marks
i.	Assignment	5
ii	Seminar/Quiz/Field survey /Viva etc.	5
iii	Attendance	5
iv	Two Test papers (2 x 5)	10
	Total	25

b) For Practical

Components	Marks
------------	-------

Attendance	5
Written/Lab test	5
Laboratory Involvement/ Record*	10
Viva	5
Total	25

*Marks awarded for Record should be related to number of experiments recorded

c) For Project

Components	Marks
Topic/Area selected	2
Experimentation/Data collection	5
Punctuality	3
Compilation	5
Content	5
Presentation	5
Total	25

12.4 Evaluation of Attendance

% of attendance	Mark
Above 90%	5
Between 85 and < 90	4
Between 80 and below 85	3
Between 76 and below 80	2
75	1

Assignment

Components	Marks
Punctuality	1

Content	2
Conclusion	1
Reference/Review	1
Total	5

Seminar

Components	Marks
Content	2
Presentation	2
Reference/Review	1
Total	5

12.5 To ensure transparency of the evaluation process, the internal assessment marks awarded to the students in each course in a semester shall be published on the notice board at least one week before the commencement of external examination. There shall not be any chance for improvement for internal mark.

12.6 The course teacher and the faculty advisor shall maintain the academic record of each student registered for the course which shall be forwarded to the controller of examinations through the Principal and a copy should be kept in the college for at least two years for verification.

12.7 External Evaluation: The external examination in theory courses shall be conducted by the college with question papers set by external experts/ question bank. The evaluation of the answer scripts shall be done by the examiners based on a well-defined scheme of evaluation given by the question paper setters. The external evaluation shall be done immediately after the examination preferably through the centralised valuation.

12.8 The question paper should be strictly on the basis of model question paper set by BoS with due weightage for each module of the course and there shall be a combined meeting of the question paper setters and experts for scrutiny for finalisation of question paper. Each set of question should be accompanied by its scheme of valuation.

12.9 For all courses (theory & practical), Letter grades and grade point are given on a 10-point scale based on the total percentage of marks, (ISA+ESA) as given below:-

Percentage of Marks	Grade	Grade Point (GP)
---------------------	-------	------------------

95 and above	O Outstanding	10
85 to below 95	A ⁺ Excellent	9
75 to below 85	A Very Good	8
65 to below 75	B ⁺ Good	7
55 to below 65	B Above Average	6
45 to below 55	C Average	5
40 to below 45	D Pass	4
Below 40	F Fail	0
	Ab Absent	0

Grades for the different semesters and overall programme are given based on the corresponding GPA as shown below:

GPA	Grade
Equal to 9.5 and above	<i>O Outstanding</i>
Equal to 8.5 and below 9.5	<i>A+ Excellent</i>
Equal to 7.5 and below 8.5	<i>A Very Good</i>
Equal to 6.5 and below 7.5	<i>B+ Good</i>
Equal to 5.5 and below 6.5	<i>B Above Average</i>
Equal to 4.5 and below 5.5	<i>C Average</i>
Equal to 4.0 and below 4.5	<i>D Pass</i>
Below 4.0	<i>F Failure</i>

12.10 A separate minimum of 40% marks (D grade) required for a pass for both internal evaluation and external evaluation for every course.

12.11 A candidate who has not secured minimum marks/credits in internal examinations can re-do the same registering along with the end semester examination for the same semester, subsequently.

12.12 A student who fails to secure a minimum marks/grade for a pass in a course will be permitted to write the examination along with the next batch.

There will be no improvement examinations

12.13 After the successful completion of a semester, Semester Grade Point Average (SGPA) of a student in that semester is calculated using the formula given below. For the successful completion of semester, a student should pass all courses and score a minimum SGPA of

4.0 However, a student is permitted to move to the next semester irrespective of her/his SGPA.

Credit Point (CP) of a course is calculated using the formula

$$CP = Cr \times GP, \text{ where } Cr = \text{Credit}; GP = \text{Grade point}$$

Semester Grade Point Average (SGPA) of a Semester is calculated using the formula

$$SGPA = TCP/TCr, \text{ where}$$

$$TCP = \text{Total Credit Point of that semester} = \sum_1^n CP_i;$$

$$TCr = \text{Total Credit of that semester} = \sum_1^n Cr_i$$

Where n is the number of courses in that semester

Cumulative Grade Point Average (CGPA) of a Programme is calculated using the formula

$$CGPA = \frac{\sum(TCP \times TCr)}{\sum TCr} \text{ GPA shall be round off to two decimal places}$$

12.14 PATTERN OF QUESTIONS

Questions shall be set to assess knowledge acquired, standard, application of knowledge, application of knowledge in new situations, critical evaluation of knowledge and the ability to synthesize knowledge. The question setter shall ensure that questions covering all skills are set. He/She shall also submit a detailed scheme of evaluation along with the question paper.

A question paper shall be a judicious mix of, multiple /objective ,short answer type, short essay type /problem solving type and long essay type questions.

Pattern of questions for external examination for theory paper

Type of Questions	Total no. of questions	Number of questions to be answered	Marks of each question	Total marks
Section A – Short Answer	12	8	2	16
Section B- Short essay/ Problems	10	7	5	35
Section C- Long essay	4	2	12	24

	26	17		75
--	----	----	--	----

Pattern of questions for external examination of practical papers will be decided by Practical exam board chairman as per the guidelines of Board of Studies.

13. GRADE CARD

The colleges under its seal shall issue to the students, a grade card on completion of each semester, which shall contain the following information.

- a) Name of the College
- b) Title of the Postgraduate Programme
- c) Name of the Semester
- d) Name and Register Number of the student
- e) Code, Title, Credits and Max. Marks (Internal, External & Total) of each course (theory & Practical) in the semester.
- f) Internal, External and Total Marks awarded, Grade, Grade point and Credit point in each course in the semester
- g) The total credits, total marks (Max. & Awarded) and total credit points in the semester
- h) Semester Grade Point Average (SGPA) and corresponding Grade.
- i) Cumulative Grade Point Average (CGPA)
- j) The final Mark cum Grade Card issued at the end of the final semester shall contain the details of all courses (theory & practical) taken during the final semester examination and shall include the final grade/marks scored by the candidate from 1st to 3rd semester, and the overall grade/marks for the total programme.

14. AWARD OF DEGREE

The successful completion of all the courses with 'D' grade (40%) shall be the minimum requirement for the award of the degree

15. MONITORING COMMITTEE

There shall be a Monitoring Committee constituted by the principal consisting of faculty advisors, HOD, a member from teacher learning evaluation committee (TLE) and college coordinator to monitor the internal evaluations conducted by college. The Course teacher, Faculty Advisor, and the College Coordinator should keep all the records of the internal evaluation, for at least a period of two years, for verification.

16. GRIEVANCE REDRESSAL MECHANISM

In order to address the grievance of students regarding Continuous internal assessment (CIA) a three-level Grievance Redressal mechanism is envisaged. A student can approach the upper level only if grievance is not addressed at the lower level.

Level 1: At the level of the concerned course teacher

Level 2: At the level of a department committee consisting of the Head of the Department, a coordinator of internal assessment for each programme nominated by the HoD and the course teacher concerned.

Level 3: A committee with the Principal as Chairman, Dean of the concerned Faculty, HOD of concerned department and one member of the Academic council nominated by the principal every year as members.

17. TRANSITORY PROVISION

Notwithstanding anything contained in these regulations, the Principal shall, for a period of three year from the date of coming into force of these regulations, have the power to provide by order that these regulations shall be applied to any programme with such modifications as may be necessary

18. REPEAL

The Regulations now in force in so far as they are applicable to programmes offered by the college and to the extent they are inconsistent with these regulations are hereby repealed. In the case of any inconsistency between the existing regulations and these regulations relating to the Choice Based Credit System in their application to any course offered in the College, the latter shall prevail.

PROGRAM STRUCTURE

Curriculum and Syllabus for MSc Applied - Pharmaceutical Chemistry

Course Code	Course Title	Credits	Hours / Week	Hour / Sem.	Examination		
					ESE Duration	ESE Max. Marks	CIA Max. Marks
SEMESTER I							
20P1CPHT01	Inorganic Chemistry - I	4	4	72	3 Hrs.	75	25
20P1CPHT02	Basic Organic Chemistry	4	4	72	3 Hrs.	75	25
20P1CPHT03	Physical Chemistry - I	3	3	54	3 Hrs.	75	25
20P1CPHT04	Quantum Chemistry & Group Theory	4	4	72	3 Hrs.	75	25
20P2CPHP01	Inorganic Chemistry Practical – I	-	3	54	<i>Examination at the end of Sem II</i>		
20P2CPHP02	Organic Chemistry Practical – I	-	3	54	<i>Examination at the end of Sem II</i>		
20P2CPHP03	Physical Chemistry Practical - I	-	4	72	<i>Examination at the end of Sem II</i>		
	Total	15	25	450			
SEMESTER II							
20P2CPHT05	Inorganic Chemistry - II	4	4	72	3 Hrs.	75	25
20P2CPHT06	Organic Reaction Mechanism	4	4	72	3 Hrs.	75	25
20P2CPHT07	Physical Chemistry - II	3	3	54	3 Hrs.	75	25
20P2CPHT08	Theoretical and Computational Chemistry	4	4	72	3 Hrs.	75	25
20P2CPHP01	Inorganic Chemistry Practical – I	3	3	54	6 Hrs.	75	25
20P2CPHP02	Organic Chemistry Practical – I	3	3	54	6 Hrs.	75	25
20P2CPHP03	Physical Chemistry Practical – I	3	4	72	6 Hrs.	75	25
	Total	24	25	450			
SEMESTER III							
20P3CPHT09	Drug Design and Pharmacology	4	4	72	3 Hrs.	75	25
20P3CPHT10	Organic Syntheses	4	4	72	3 Hrs.	75	25
20P3CPHT11	Physical Chemistry - III	4	4	72	3 Hrs.	75	25
20P3CPHT12	Spectroscopic Methods in Chemistry	3	3	54	3 Hrs.	75	25
20P4CPHP04	Pharmaceutical Analysis Practical	-	3	54	<i>Examination at the end of Sem IV</i>		
20P4CPHP05	Drug Synthesis Practical	-	3	54	<i>Examination at the end of Sem IV</i>		
20P4CPHP06	Biochemistry and Bacteriology Practical	-	4	72	<i>Examination at the end of Sem IV</i>		
	Total	15	25	450			
SEMESTER IV							
20P4CPHT13EL	Biochemistry and Bacteriology	4	5	90	3 Hrs.	75	25
20P4CPHT14EL	Advances in Pharmaceutical Operations	4	5	90	3 Hrs.	75	25

SEMESTER I

20P1CPHT01: INORGANIC CHEMISTRY-I**Credits: 4****Contact Lecture Hours : 72**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSO</i> s	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the key concepts of inorganic and organometallic chemistry including those related to synthesis, reaction chemistry, and structure and bonding.	PO 1 PSO 1	U	F	27
CO2	Explain stability of organometallic compounds and clusters, and their application as industrial catalysts.	PO 1 PSO 4	A	C	18
CO3	Recognize and explain the interaction of different metal ions with biological ligands.	PO 1 PSO 1	U	F	18
CO4	Demonstrate a systematic understanding of the key aspects of nuclear chemistry and their analytical applications.	PO 1 PSO 1	U	F	9

Unit 1: Organometallic Compounds - Synthesis, Structure and Bonding (18 Hrs)

- 1.1 Haptonomenclature of organometallic compounds, organometallic compounds with linear pi-donor ligands-olefins, acetylenes, dienes and allyl complexes-synthesis, structure and bonding.
- 1.2 Synthesis and structure of complexes with cyclic pi donors, metallocenes and cyclic arene complexes, bonding in ferrocene and dibenzenechromium, carbene and carbene complexes.
- 1.3 Metal carbonyls: CO as a π -bonding ligand, synergism, preparation, properties, structure and bonding of simple mono and binuclear metal carbonyls, metal nitrosyls, metal cyanides and dinitrogen complexes. Polynuclear metal carbonyls with and without bridging. Carbonyl clusters - LNCCS and HNCCS, Isoelectronic and isolobal analogy, Wade-Mingos rules, cluster valence electrons. IR spectral studies of bridging and non-bridging CO ligands.

Unit 2: Reactions of Organometallic Compounds (9 Hrs)

- 2.1 Substitution reactions - nucleophilic ligand substitution, nucleophilic and electrophilic attack on coordinated ligands.
- 2.2 Addition and elimination reactions -1,2 additions to double bonds, carbonylation and decarbonylation, Oxidative addition- concerted addition, S_N2 , radical and ionic mechanisms. Reductive elimination- binuclear reductive elimination and σ -bond

metathesis. Oxidative coupling and reductive decoupling. Insertion (migration) and elimination reactions – insertions of CO and alkenes, insertion into M–H versus M–R, α , β , γ and δ eliminations.

2.3 Redistribution reactions, fluxional isomerism of allyl, cyclopentadienyl and allene systems.

Unit 3: Catalysis by Organometallic Compounds

(18 Hrs)

- 3.1 Homogeneous and heterogeneous organometallic catalysis : Tolman catalytic loops, alkene hydrogenation using Wilkinson catalyst,
- 3.2 Reactions of carbon monoxide and hydrogen-the water gas shift reaction, synthesis gas based reactions - the Fischer-Tropsch reaction (*synthesis of gasoline*).
- 3.3 Hydroformylation of olefins using cobalt or rhodium catalyst.
- 3.4 Polymerization by organometallic initiators and templates for chain propagation - Ziegler Natta catalysts. Polymerisation by metallocene catalysts.
- 3.5 Carbonylation reactions-Monsanto acetic acid process olefin hydroformylation- oxo process, carbonylation of alkenes and alkynes in the presence of a nucleophile – the Reppe reaction. Carbonylation of aryl halides in the presence of a nucleophile
- 3.6 Olefin methathesis-synthesis gas based reactions, photodehydrogenation catalyst (“Platinum Pop”). Olefin methathesis, photodehydrogenation catalyst (“Platinum Pop”). Palladium catalysed oxidation of ethylene-the Wacker process.
- 3.7 Oxidation of olefins: Palladium catalysed oxidation of ethylene - the Wacker process, epoxidation of olefins, hydroxylation by metal-oxo complexes
- 3.8 Asymmetric catalysis- Asymmetric hydrogenation, isomerisation and epoxidation.
- 3.9 C-H activation and functionalization of alkanes and arenes: Radical type oxidation, hydroxylation, dehydrogenation, carbonylation and regioselective borylation of alkanes and cycloalkanes. Radicaltype reactions, electrophilic reactions, carbonylation and borylation of arenes. Insertion of alkenes and alkynes in the Ar-H bond.
- 3.10 Application of palladium catalysts in the formation of C-O and C-N bonds, oxidative coupling reactions of alkynes with other unsaturated fragments for the formation of cyclic and heterocyclic compounds. The Dötz reaction.

Unit 4: Bioinorganic Compounds

(18 Hrs)

- 4.1 Essential and trace elements in biological systems, toxic effects of metals (Cd, Hg, Cr, Pb and As), structure and functions of biological membranes, mechanism of ion transport across membranes, sodium pump, ionophores, valinomycin. Phosphate esters in biology, Redox metalloenzymes, cytochromes-cytochrome P450.
- 4.2 Oxygen carriers and oxygen transport proteins: Structure and functions of haemoglobins and myoglobin, oxygen transport mechanism, cooperativity, Bohr Effect. Structure and functions of haemerythrins and haemocyanin.
- 4.3 Biochemistry of zinc and copper: Structure and functions of carbonic anhydrase,

carboxypeptidase A and superoxide dismutase.

Unit 5: Nuclear Chemistry

(9 Hrs)

- 5.1 Nuclear Reactions: Q value and reaction threshold, reaction cross section, cross section and reaction rate, neutron capture cross section- variation of neutron capture cross section with energy (1/V law). Nuclear fission - fission fragments and mass distribution, fission yields, fission energy, fission cross section and threshold fission neutrons, nuclear fusion reactions and their applications.
- 5.2 Principles of counting technique: G.M. counter, proportional, ionization and scintillation counters, cloud chamber.
- 5.3 Synthesis of transuranic elements: Neptunium, Plutonium, Curium, Berkelium, Einsteinium, Mendelevium, Nobelium, Lawrencium
- 5.4 Analytical applications of radioisotopes-radiometric titrations, kinetics of exchange reactions, measurement of physical constants including diffusion constants, Radioanalysis, Neutron Activation Analysis, Prompt Gama Neutron Activation Analysis and Neutron Absorptiometry.
- 5.5 Radiation chemistry of water and aqueous solutions. Measurement of radiation doses. Relevance of radiation chemistry in biology, organic compounds and radiation polymerization.

SEMESTER I

20P1CPHT02 : BASIC ORGANIC CHEMISTRY

Credit : 4

Contact Lecture Hours: 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Explain the basic concepts of organic chemistry.	PO 1 PSO 1	R	F	18
CO2	Illustrate the principles of physical organic chemistry.	PO 1 PSO 1	U	C	9
CO3	Recognize the importance of organic photochemical reactions.	PO 1 PSO 3	U	F	9
CO4	Demonstrate the reactivity and stability of organic molecules based on structure, including conformation and stereochemistry.	PO 1 PSO 4	U	C	36

Unit 1: Basic Concepts in Organic Chemistry

(18 Hrs)

- 1.1 Review of basic concepts in organic chemistry: Bonding, hybridisation, MO picture of butadiene and allyl systems.
- 1.2 Electron displacement effects: Inductive effect, electromeric effect, resonance effect, hyperconjugation, steric effect. Bonding weaker than covalent bonds.
- 1.3 Concept of aromaticity: Delocalization of electrons - Hückel's rule, criteria for aromaticity, examples of neutral and charged aromatic systems - annulenes. NMR as a tool, carbon nanotubes and graphene.
- 1.4 Mechanism of electrophilic and nucleophilic aromatic substitution reactions with examples. Arenium ion intermediates. S_N1 , S_NAr , S_RN1 and benzyne mechanisms.
- 1.5 Structure and reactions of α , β -unsaturated carbonyl compounds involving electrophilic and nucleophilic addition - Michael addition, Mannich reaction, Robinson annulation.

Unit 2: Physical Organic Chemistry

(9 Hrs)

- 2.1 Energy profiles. Kinetic versus thermodynamic control of product formation, Hammond postulate, kinetic isotope effects with examples. Linear free energy relationships-Hammett equation, Taft equation.
- 2.2 Catalysis by acids, bases and nucleophiles with examples from acetal, cyanohydrin. Ester formation and hydrolysis reactions of esters - AAC2, AAC1, AAL1, BAC2 and BAL1 mechanisms.

Unit 3: Organic Photochemistry

(9 Hrs)

- 3.1 Photoreactions of carbonyl compounds: Norrish reactions of ketones. Paterno - Buchi reaction. Barton (*nitrite ester reaction*); Di- π -methane and Photo Fries rearrangements, photochemistry of conjugated dienes (*butadiene only*), photochemistry of vision.

Unit 4: Stereochemistry of Organic Compounds

(18 Hrs)

- 4.1 Stereoisomerism: Definition based on symmetry and energy criteria, configuration and conformational stereoisomers, introduction to Atropisomerism (*basic idea only*)
- 4.2 Center of chirality: Molecules with C, N, S based chiral centers, absolute configuration, enantiomers, racemic modifications, R and S nomenclature using Cahn-Ingold-Prelog rules, molecules with a chiral center and C_n , molecules with more than one center of chirality, definition of diastereoisomers, constitutionally symmetrical and unsymmetrical chiral molecules, erythro and threo nomenclature.
- 4.3 Axial, planar and helical chirality with examples, stereochemistry and absolute configuration of allenes, biphenyls and binaphthyls, ansa and cyclophanic compounds, spiranes, exo-cyclic alkylidenecycloalkanes.
- 4.4 Topicity and prostereoisomerism, topicity of ligands and faces as well as their nomenclature, NMR distinction of enantiotopic/diastereotopic ligands.
- 4.5 Geometrical isomerism: nomenclature, E-Z notation, methods of determination of geometrical isomers, interconversion of geometrical isomers.

Unit 5: Conformational Analysis

(18 Hrs)

- 5.1 Conformational descriptors : Factors affecting conformational stability of molecules, conformational analysis of substituted ethanes, cyclohexane and its derivatives, decalins, adamantane, norbornane, sucrose and lactose.
- 5.2 Conformation and reactivity of elimination (dehalogenation, dehydrohalogenation, semipinacolic deamination and pyrolytic elimination - Saytzeff and Hofmann eliminations), substitution and oxidation of 2° alcohols.
- 5.3 Chemical consequence of conformational equilibrium - Curtin Hammett principle.

SEMESTER I

20P1CPHT03 : PHYSICAL CHEMISTRY - I

Credit : 3

Contact Lecture Hours: 54

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Application of mathematical tools to calculate thermodynamic and kinetic properties.	PO 1 PSO 3	A	P	18
CO2	Explain the relationship between microscopic properties of molecules with macroscopic thermodynamic observables.	PO 1 PSO 2	U	C	27
CO3	Explain the kinetic behaviour of gases and their transport properties.	PO 1 PSO 4	U	C	9

Unit 1: Classical Thermodynamics**(18 Hrs)**

- 1.1 Mathematical foundations for thermodynamics-variables of thermodynamics, extensive and intensive quantities, equation for total differential, conversion formulas, exact differentials-general formulation, reciprocity characteristics, homogeneous functions, Euler's theorem.(*Non-evaluative*).
- 1.2 Irreversible processes - Clausius inequality, Free energy, thermodynamic equilibrium, Maxwell relations and significance.
- 1.3 Partial molar quantities, chemical potential and Gibbs-Duhem equations,
- 1.4 Fugacity, relation between fugacity and pressure, Activity and activity coefficient.
- 1.5 Thermodynamics of mixing, Gibbs-Duhem-Margules equation, applications of Gibbs-Duhem- Margules equation- Kononov's first and second laws, excess thermodynamic functions-free energy, enthalpy, entropy and volume.
- 1.6 **Chemical affinity and thermodynamic functions, effect of temperature and pressure on chemical equilibrium.**
- 1.7 **Third law of thermodynamics, Nernst heat theorem, determination of absolute entropies using third law.**
- 1.8 **Three component systems-graphical representation. Solid-liquid equilibria, ternary solutions with common ions, hydrate formation, compound formation. Liquid-liquid equilibria-one pair of partially miscible liquids, two pairs of partially miscible liquids, three pairs of partially miscible liquids.**

Unit 2: Kinetic Theory of Gases

(9 Hrs)

- 2.1 Derivation of Maxwell's law of distribution of velocities, graphical representation, experimental verification of the law, most probable velocity, derivation of average, RMS and most probable velocities.
- 2.2 Collision diameter, collision frequency in a single gas and in a mixture of two gases, mean free path, frequency of collision, effusion, the rate of effusion, time dependence of pressure of an effusing gas, the law of corresponding states, transport properties of gases.

Unit 3: Statistical Thermodynamics

(27 Hrs)

- 3.1 Brief history about the macroscopic and microscopic approach in science, permutation, probability, Stirling's approximation, macrostates and microstates, *equal a priori* principle and thermodynamic probability, thermodynamic probability and entropy, phase-space, ensemble, types of ensembles.
- 3.2 Boltzmann distribution law, partition function and its physical significance, relation between molecular partition function and molar partition function, distinguishable and indistinguishable particles, partition function and thermodynamic functions, separation of partition function-translational, rotational, vibrational, and electronic partition functions, partition function for hydrogen. Thermal de-Broglie wavelength.
- 3.3 Calculation of thermodynamic functions and equilibrium constants, Sackur-Tetrode equation, statistical formulation of third law of thermodynamics, residual entropy, heat capacity of gases - classical and quantum theories.
- 3.4 *Heat capacity of solids*: the vibrational properties of solids, Einstein's theory and its limitations, Debye theory and its limitations.
- 3.5 Need for quantum statistics, Bosons and Fermions, *Bose-Einstein statistics*: Bose-Einstein distribution law, Bose-Einstein condensation, first order and higher order phase transitions, liquid helium, *Fermi-Dirac statistics*: Fermi-Dirac distribution law, application in electron gas, thermionic emission.
Comparison of three statistics.

SEMESTER I
20P1CPHT04 : QUANTUM CHEMISTRY AND GROUP THEORY

Credit: 4

Contact Lecture Hours: 72

	<i>Course Outcome</i>	<i>POs / PSO</i> s	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Explain the fundamentals of group theory.	PO 1 PSO 1	R	F	9
CO2	Apply the principles of group theory in chemical bonding.	PO 1 PSO 3	A	C	27
CO3	Understand the foundation and postulates of quantum mechanics.	PO 1 PSO 3	U	F	6
CO4	Describe the use of simple models for predictive understanding of different molecular systems and phenomena.	PO 1 PSO 4	U	C	21
CO5	Illustrate the concept of atomic orbitals by quantum mechanics.	PO 1 PSO 3	U	C	9

After completing the course, the students will be able to:

CO1	Explain the fundamentals of group theory.
CO2	Apply the principles of group theory in chemical bonding.
CO3	Understand the foundation and postulates of quantum mechanics.
CO4	Describe the use of simple models for predictive understanding of different molecular systems and phenomena.
CO5	Illustrate the concept of atomic orbitals by quantum mechanics.

Unit 1 : Group Theory and Applications in Chemical Bonding**(36 Hrs)**

- 1.1 Symmetry elements and symmetry operations.
- 1.2 Determination of point groups of molecules and ions (organic / inorganic / complex) belonging to C_n , C_s , C_i , C_{nv} , C_{nh} , $C_{\infty v}$, D_{nh} , $D_{\infty h}$, D_{nd} , T_d and O_h point groups.
- 1.3 Symmetry in crystals: 32 crystallographic point groups (*no derivation*), Hermann-Mauguin symbols. Screw axis-pitch and fold of screw axis, glide planes, space groups (*elementary idea only*)
- 1.4 Mathematical groups: Properties, Abelian groups, cyclic groups, sub groups, similarity transformation, classes – C_{2v} , C_{3v} and C_{2h} .
- 1.5 Group multiplication tables (GMTs) – C_{2v} , C_{3v} and C_{2h} , isomorphic groups.

- 1.6 Matrix representation of elements like E, C_n , S_n , I, σ -matrix representation of point groups like C_{2v} , C_{3v} , C_{2h} , C_{4v} – trace /character, block factored matrices.
- 1.7 Reducible and irreducible representations, standard reduction formula, statement of great orthogonality theorem (GOT). Construction of character tables for C_{2v} , C_{2h} , C_{3v} and C_{4v} .
- 1.8. Application in chemical bonding: Projection operator, transformation properties of atomic orbitals, construction of symmetry adapted linear combination of atomic orbitals (SALCs) of C_{2v} , C_{3v} , D_{3h} and C_{2h} molecules.

Unit 2 : Quantum Mechanics and Applications

(36 Hrs)

- 2.1. Experimental foundation of quantum mechanics: Elementary ideas of black body radiation, photoelectric effect and atomic spectra. Need of quantum mechanics. Concept of matter wave, de Broglie relation, uncertainty principle and its consequences.
- 2.2. Postulates of Quantum Mechanics: State function or wave function postulate: Born interpretation of the wave function, well behaved functions, orthonormality of wave functions. Operator postulate: Operator algebra, linear and nonlinear operators, Laplacian operator, commuting and noncommuting operators, Hermitian operators and their properties, eigen functions and eigen values of an operator. Eigen value postulate: eigen value equation, eigen functions of commuting operators. Expectation value postulate. Postulate of time-dependent Schrödinger equation, conservative systems and time-independent Schrödinger equation.
- 2.3. Translational motion: Free particle in one-dimension, particle in a one dimensional box with infinite potential walls, particle in a one-dimensional box with finite potential walls-tunneling, particle in a three dimensional box ,separation of variables, degeneracy.
- 2.4. Vibrational motion: One-dimensional harmonic oscillator (complete treatment), Hermite equation (solving by method of power series), Hermite polynomials, recursion relation, wave functions and energies-important features, harmonic oscillator model and molecular vibrations.
- 2.5. Rotational motion: Co-ordinate systems, cartesian, cylindrical polar and spherical polar coordinates and their relationships. The wave equation in spherical polar coordinates-particle on a ring, the phi equation and its solution, wave functions in the real form. Non-planar rigid rotor (or particle on a sphere), separation of variables, the phi and the theta equations and their solutions, Legendre and associated Legendre equations, Legendre and associated Legendre polynomials. Spherical harmonics (imaginary and real forms), polar diagrams of spherical harmonics.
- 2.6. Quantization of angular momentum, quantum mechanical operators corresponding to angular momenta (L_x , L_y , L_z and L^2), commutation relations between these operators. Spherical harmonics as eigen functions of angular momentum operators L_z and L^2 . Ladder operator method for angular momentum, space quantization.
- 2.7. Quantum Mechanics of Hydrogen-like Atoms: Potential energy of hydrogen-like systems. The wave equation in spherical polar coordinates: separation of variables-r, theta and phi

equations and their solutions, wave functions and energies of hydrogen like atoms. Orbitals: Radial functions, radial distribution functions, angular functions and their plots. Dirac's relativistic equation for hydrogen atom (*Elementary idea only*).

- 2.8. Spin orbitals: Construction of spin orbitals from orbitals and spin functions, spin orbitals for many electron atoms, symmetric and antisymmetric wave functions. Pauli's exclusion principle, Slater determinants.

SEMESTER II

20P2CPHT05 : INORGANIC CHEMISTRY - II

Credit : 4

Contact Lecture Hours: 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Understand the structural and bonding aspects of co-ordination compounds.	PO 1 PSO 1	U	F	18
CO2	Explain the spectral and magnetic properties of metal complexes.	PO 1 PSO 3	U	C	18
CO3	Explain the thermodynamic and kinetic aspects of reactions of metal complexes.	PO 1 PSO 1	U	C	18
CO4	Understand the stereochemistry of co-ordination compounds.	PO 1 PSO 1	U	C	9
CO5	Describe the co-ordination chemistry of lanthanoids and actinoids	PO 1 PSO 3	U	F	9

Unit 1: Structural Aspects and Bonding**(18 Hrs)**

- 1.1 Classification of complexes based on coordination numbers and possible geometries, sigma and pi bonding ligands such as CO, NO, CN⁻, R₃P, and Ar₃P. Stability of complexes, thermodynamic aspects of complex formation-Irving William order of stability, chelate effect.
- 1.2 Splitting of d orbitals in octahedral, tetrahedral, square planar, square pyramidal and trigonal bipyramidal fields, LFSE, Dq values, Jahn Teller (JT) effect, theoretical failure of crystal field theory, evidence of covalency in the metal-ligand bond, nephelauxetic effect, ligand field theory, molecular orbital theory - M.O energy level diagrams for octahedral and tetrahedral complexes without and with π - bonding, experimental evidences for pi-bonding.

Unit 2: Spectral and Magnetic Properties of Metal Complexes**(18 Hrs)**

- 2.1 Electronic Spectra of complexes: Term symbols of dⁿ system, Racah parameters, splitting of terms in weak and strong octahedral and tetrahedral fields, correlation diagrams for d¹ and d⁹ ions in octahedral and tetrahedral fields (*qualitative approach*), d-d transitions, selection rules for electronic transitions-effect of spin orbit coupling and vibronic coupling.
- 2.2 Interpretation of electronic spectra of complexes: Orgel diagrams and demerits, Tanabe Sugano diagrams, calculation of Dq, B and β (*Nephelauxetic ratio*) values, spectra of complexes with lower symmetries, charge transfer spectra, luminescence spectra.
- 2.3 Magnetic properties of complexes-paramagnetic and diamagnetic complexes, molar susceptibility, Gouy method for the determination of magnetic moment of complexes, spin

only magnetic moment. Temperature dependence of magnetism- Curie's law, Curie-Weiss law, temperature independent paramagnetism (TIP), spin state cross over, antiferromagnetism-inter and intra molecular interaction, anomalous magnetic moments.

Unit 3: Kinetics and Mechanism of Reactions in Metal Complexes (18 Hrs)

- 3.1 Thermodynamic and kinetic stability, kinetics and mechanism of nucleophilic substitution reactions in square planar complexes- trans effect-theory and applications, effect of entering ligand, effect of leaving group and effect of ligands already present on reaction rate, effect of solvent and reaction pathways, substitution in tetrahedral and five-coordinate complexes.
- 3.2 Kinetics and mechanism of octahedral substitution- water exchange, dissociative and associative mechanisms, base hydrolysis, racemization reactions, solvolytic reactions (acidic and basic). Replacement reactions involving multidendate ligands - formation of chelates, effect of H^+ on the rates of substitution of chelate complexes, metal ion assisted and ligand assisted dechelation.
- 3.3 Electron transfer reactions: Outer sphere mechanism-Marcus theory, inner sphere mechanism-Taube mechanism, mixed outer and inner sphere reactions, two electron transfer and intramolecular electron transfer.

Unit 4: Stereochemistry of Coordination Compounds (9 Hrs)

- 4.1 Geometrical and optical isomerism in octahedral complexes, resolution of optically active complexes, determination of absolute configuration of complexes by ORD and circular dichroism, stereoselectivity and conformation of chelate rings, asymmetric synthesis catalyzed by coordination compounds,
- 4.2 Linkage isomerism: Electronic and steric factors affecting linkage isomerism, symbiosis-hard and soft ligands, Prussian blue and related structures, Macrocycles crown ethers.

Unit 5: Coordination Chemistry of Lanthanoids and Actinoids (9 Hrs)

- 5.1 Term symbols for lanthanide ions, inorganic compounds and coordination complexes of the lanthanoids upto coordination No.12, electronic spectra and magnetic properties of lanthanoid complexes, organometallic complexes of the lanthanoids - σ -bonded complexes, cyclopentadienyl complexes, organolanthanoid complexes as catalysts.
- 5.2 General characteristics of actinoids-difference between 4f and 5f orbitals, coordination complexes of the actinoids- sandwich complexes, coordination complexes and organometallic compounds of thorium and uranium, comparative account of coordination chemistry of lanthanoids and actinoids with special reference to electronic spectra and magnetic properties.

SEMESTER II

20P2CPHT06 : ORGANIC REACTION MECHANISM

Credit : 4

Contact Lecture Hours : 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the mechanisms of different types organic reactions.	PO 1 PSO 1	U	F	12
CO2	Explain the chemistry of carbanions, carbocations, carbenes, carbenoids, nitrenes and arynes.	PO 1 PSO 1	U	F	27
CO3	Understand the chemistry of radical reactions and its applications.	PO 1 PSO 1	U	C	9
CO4	Explain the basics and applications of concerted reactions	PO 1 PSO 3	U	C	24

Unit 1: Review of Organic Reaction Mechanisms**(12 Hrs.)**

- 1.1 Review of organic reaction mechanisms with special reference to nucleophilic and electrophilic substitution at aliphatic carbon (S_N^1 , S_N^2 , S_Ni , SE_1 and SE_2) elimination (E_1 and E_2) and addition reactions (Regioselectivity: Markovnikov's addition - carbocation mechanism, anti-Markovnikov's addition - radical mechanism). Elimination vs Substitution.
- 1.2 A comprehensive study on the effect of substrate, reagent, leaving group, solvent, ambident nucleophile and neighbouring group on nucleophilic substitution (S_N1 and S_N2) and elimination (E_1 and E_2) reactions.
- 1.3 Electrophilic substitution *via* enolization and Stork-enamine reaction. Von Richter, Vilsmeier formylation, Jacobson and Gatterman-Koch reactions.

Unit 2: Chemistry of Carbanions**(9 Hrs.)**

- 2.1 Formation, structure and stability of carbanions. Reactions of carbanions: C-X bond (X = C, O, N) formations through the intermediary of carbanions. Chemistry of enolates and enamines. Kinetic and Thermodynamic enolates-lithium and boron enolates in aldol Alkylation and acylation of enolates.
- 2.2 Nucleophilic additions to carbonyls groups. Name reactions under carbanion chemistry – Mechanism of Claisen, Dieckmann, Knoevenagel, Stobbe, Darzen and acyloin condensations, Shapiro reaction and Julia elimination. Favorski rearrangement.

- 2.3 Ylides: Chemistry of Phosphorous and Sulphur ylides - Wittig and related reactions, Peterson olefination.

Unit 3: Chemistry of Carbocations (9Hrs.)

- 3.1 Formation, structure and stability of carbocations. Classical and non-classical carbocations.
- 3.2 C-X bond (X = C, O, N) formations through the intermediary of carbocations. Molecular rearrangements including Wagner-Meerwein, Pinacol-pinacolone, semi-pinacol, Dienone-phenol and Benzilic acid rearrangements, Noyori annulation, Prins reaction.
- 3.3 C-C bond formation involving carbocations: Oxymercuration, halolactonisation.

Unit 4: Carbenes, Carbenoids, Nitrenes and Arynes (9 Hrs)

- 4.1 Structure of carbenes (singlet and triplet) - generation of carbenes - addition and insertion reactions.
- 4.2 Rearrangement reactions of carbenes such as Wolff rearrangement - generation and reactions of ylids by carbenoid decomposition.
- 4.3 Structure, generation and reactions of nitrene and related electron deficient nitrene intermediates.
- 4.4 Hoffmann, Curtius, Lossen, Schmidt and Beckmann rearrangement reactions.
- 4.5 Arynes: Generation, structure, stability and reactions. Orientation effect- amination of haloarenes.

Unit 5: Radical Reactions (9 Hrs)

- 5.1 Generation of radical intermediates and its (a) addition to alkenes, alkynes (inter & intramolecular) for C-C bond formation - Baldwin's rules (b) fragmentation and rearrangements – Hydroperoxide: formation, rearrangement and reactions. Auto-oxidation.
- 5.2 Named reactions involving radical intermediates: Barton deoxygenation and decarboxylation, McMurry coupling.

Unit 6: Concerted reactions (24 Hrs)

- 6.1 Classification: Electrocyclic, sigmatropic, cycloaddition, chelotropic and ene reactions. Woodward Hoffmann rules - frontier orbital and orbital symmetry correlation approaches - PMO method (*for electrocyclic and cycloaddition reactions only*)

- 6.2 Highlighting pericyclic reactions in organic synthesis such as Claisen, Cope, Wittig, Mislow-Evans and Sommelet-Hauser rearrangements. Diels-Alder and Ene reactions (*with stereochemical aspects*), dipolar cycloaddition (*introductory*).
- 6.3 Unimolecular pyrolytic elimination reactions: cheletropic elimination, decomposition of cyclic azo compounds, β -eliminations involving cyclic transition states such as N-oxides (Cope reaction), acetates and xanthates (Chugayev reaction)
- 6.4 Introduction to Click reactions - Mechanism of the Huisgen Azide - Alkyne 1, 3-Dipolar Cycloaddition, Staudinger ligation and Staudinger reduction.

SEMESTER II

20P2CPHT07 : PHYSICAL CHEMISTRY - II

Credit : 3

Contact Lecture Hours : 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Analyze atomic, molecular and spin resonance spectroscopy.	PO 1 PSO 2	AN	F	12
CO2	Define aspects of specific spectroscopic techniques, applications of molecular symmetry in spectroscopy.	PO 1 PSO 1	U	C	27
CO3	Understand the fundamental concepts of light-matter interaction, lasers and laser systems, detectors and other relevant aspects of instrumentation necessary for spectroscopy and imaging.	PO 1 PSO 1	U	F	9
CO4	Ability to understand theory and application to mass spectrometry, ultraviolet and visible spectroscopy, infrared spectroscopy, Raman, fluorescence, nuclear magnetic resonance spectroscopy.	PO 1 PSO 2	U	C	24

Unit 1: Foundations of Spectroscopic Techniques**(3 Hrs)**

Regions of the electromagnetic radiation, origin of spectrum, intensity of absorption, signal to noise ratio, natural line width. Doppler broadening, Lamb dip spectrum, Born Oppenheimer approximation.

Unit 2: Microwave Spectroscopy**(6 Hrs)**

- 2.1 Principal moments of inertia and classification (linear, symmetric tops, spherical tops and asymmetric tops), selection rules, intensity of rotational lines, relative population of energy levels, derivation of J_{max} , effect of isotopic substitution, calculation of intermolecular distance, spectrum of non-rigid rotors.
- 2.2 Rotational spectra of polyatomic molecules, linear and symmetric top molecules. Stark effect and its application, nuclear spin and electron spin interaction, chemical analysis by microwave spectroscopy.

Unit 3: Infrared and Raman Spectroscopy**(9 Hrs)**

- 3.1 Morse potential energy diagram, fundamental vibrations, overtones and hot bands, determination of force constants, diatomic vibrating rotator, breakdown of the Born-

Oppenheimer approximation, effect of nuclear spin.

3.2 Vibrational spectra of polyatomic molecules, normal modes of vibrations, combination and difference bands, Fermi resonance. FT technique, introduction to FTIR spectroscopy. Instrumentation of FTIR.

3.3 Scattering of light, polarizability and classical theory of Raman spectrum, rotational and vibrational Raman spectrum, complementarities of Raman and IR spectra, mutual exclusion principle, polarized and depolarized Raman lines, resonance Raman scattering and resonance fluorescence.

Unit 4: Electronic Spectroscopy (9 Hrs)

4.1 Term symbols of diatomic molecules, electronic spectra of diatomic molecules, selection rules, vibrational coarse structure and rotational fine structure of electronic spectrum. Franck-Condon principle, predissociation, calculation of heat of dissociation, Birge and Sponer method.

4.2 Electronic spectra of polyatomic molecules, spectra of transitions localized in a bond or group, free electron model. Different types of lasers-solid state lasers, continuous wave lasers, gas lasers and chemical laser, frequency doubling, applications of lasers.

Unit 5: Nuclear Magnetic Resonance Spectroscopy (18 Hrs)

5.1 Theory of NMR Spectroscopy: Interaction between nuclear spin and applied magnetic field, important magnetically active nuclei. Nuclear energy levels, population of energy levels, Larmor precession, relaxation methods. Chemical shift and its representation- δ scale of PMR and CMR. Spin-spin coupling: Theory and illustration with AX system.

5.2 Fourier Transformation (FT) NMR Spectroscopy: Instrumentation of NMR technique, magnets, probe and probe tuning, Creating NMR signals, effect of pulses, rotating frame reference, FID, FT technique, data acquisition and storage. Pulse sequences- Pulse width, spins and magnetisation vector.

5.3 Solid state NMR-Applications. Magic Angle Spinning (MAS).

Unit 6: Other Magnetic Resonance Techniques (9 Hrs)

6.1 EPR Spectroscopy: Electron spin in molecules, interaction with magnetic field, g factor, factors affecting g values, determination of g values (g_{\parallel} and g_{\perp}), fine structure and hyperfine structure, Kramers' degeneracy, McConnell equation.

6.2 Theory and important applications of NQR Spectroscopy.

6.3 Mossbauer Spectroscopy: Principle, Doppler effect, recording of spectrum, chemical shift, factors determining chemical shift, application to metal complexes.

SEMESTER II

20P2CPHT08 : THEORETICAL AND COMPUTATIONAL CHEMISTRY

Credit: 3

Contact Lecture Hours: 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Apply the principles of group theory in spectroscopy and hybridization.	PO 1 PSO 3	A	C	12
CO2	Explain the approximation methods in quantum mechanics.	PO 1 PSO 1	U	F	27
CO3	Describe the quantum mechanical explanation of chemical bonding.	PO 1 PSO 1	U	C	9
CO4	Explain the methods of computational quantum chemistry.	PO 1 PSO 3	U	C	24

Unit 1: Application of Group Theory in Spectroscopy**(18 Hrs)**

- 1.1. Vibrational mode analysis using group theory taking H₂O, NH₃ and *trans*-N₂F₂ as examples using symmetry coordinates and internal coordinates method, prediction of IR and Raman activity, rule of mutual exclusion, redundant modes, out of plane modes.
- 1.2. Application in uv-visible spectroscopy, selection rules, orbital selection rules, transitions between non-degenerate states, prediction of electronic transitions in C_{2v}, C_{3v}, C_{4v}, C_{2h} and C_{4h} using direct product terms, spin selection rules, relaxation in selection rules and distortion .
- 1.3. Application in hybridization, determination of hybridization and hybrid functions in CH₄, BF₃ and PCl₅
- 1.4. Group theory and optical activity (*brief study*)

Unit 2 : Approximation Methods in Quantum Mechanics**(18 Hrs)**

- 2.1 Many-body problem and the need of approximation methods, independent particle model. Variation method: Variation theorem with proof, illustration of variation theorem using the trial function $\psi(a-x)$ for particle in a 1D-box and using the trial function $e^{-\alpha r}$ for the hydrogen atom, variation treatment for the ground state of helium atom.
- 2.2 Perturbation method, time-independent perturbation method (*non-degenerate case only*), first order correction to energy and wave function, illustration by application to particle in a 1D-box with slanted bottom, perturbation treatment of the ground state of the helium atom. Qualitative idea of Hellmann-Feynman theorem.

- 2.3 Hartree-Fock method, multi-electron atoms. Hartree-Fock equations (*no derivation*). The Fock operator, core hamiltonian, coulomb operator and exchange operator. Qualitative treatment of Hartree-Fock Self-Consistent Field (HFSCF) method. Roothan's concept of basis functions, Slater type orbitals (STO) and Gaussian type orbitals (GTO), sketches of STO and GTO.

Unit 3: Chemical Bonding

(18 Hrs)

- 3.1 Schrödinger equation for molecules. Born-Oppenheimer approximation, valence bond (VB) theory, VB theory of H₂ molecule, singlet and triplet state functions (spin orbitals) of H₂.
- 3.2 Molecular Orbital (MO) theory, MO theory of H₂⁺ ion, MO theory of H₂ molecule, MO treatment of homonuclear diatomic molecules Li₂, Be₂, N₂, O₂ and F₂ and hetero nuclear diatomic molecules LiH, CO, NO and HF, bond order. Correlation diagrams, non-crossing rule, spectroscopic term symbols for diatomic molecules, comparison of MO and VB theories.
- 3.3 Hybridization, quantum mechanical treatment of sp, sp² and sp³ hybridisation. Semiempirical MO treatment of planar conjugated molecules, Hückel Molecular Orbital (HMO) theory of ethene, allyl systems, butadiene and benzene. Calculation of charge distributions, bond orders and free valency.

Unit 4: Computational Quantum Chemistry

(18 Hrs)

- 4.1 Introduction and scope of computational chemistry, potential energy surface, conformational search, global minimum, local minima, saddle points.
- 4.2 Ab initio methods: A review of Hartree-Fock method, self-consistent field (SCF) procedure. Roothan concept basis functions. Basis sets and its classification: Slater type and Gaussian type basis sets, minimal basis set, Pople style basis sets. Hartree-Fock limit. Post Hartree-Fock methods - introduction to Møller Plesset perturbation theory, configuration interaction, coupled cluster and semi empirical methods.
- 4.3 Introduction to Density Functional Theory (DFT) methods: Hohenberg-Kohn theorems, Kohn-Sham orbitals, exchange correlation functional, local density approximation, generalized gradient approximation, hybrid functionals (only the basic principles and terms need to be introduced).
- 4.4 Comparison of ab initio, semi empirical and DFT methods.
- 4.5 Molecular geometry input: Cartesian coordinates and internal coordinates, Z matrix, Z-matrix of single atom, diatomic molecule, non-linear triatomic molecule, linear triatomic molecule, polyatomic molecules like ammonia, methane and ethane. General format of GAMESS / Firefly input file, single point energy calculation, geometry optimization, constrained optimization and frequency calculation. Koopmans' theorem.

- 4.6 Features of molecular mechanics force field-bond stretching, angle bending, torsional terms, non-bonded interactions and electrostatic interactions. Commonly used force fields- AMBER and CHARMM.

SEMESTERS I & II

20P2CPHP01 : INORGANIC CHEMISTRY PRACTICAL-I

Credit: 3

Contact Lab Hours: 54+54=108

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Illustrate the separation and identification of mixture of cations.	PO 1 PSO 5	A	P	54
CO2	Perform colorimetric estimations.	PO 1 PSO 5	A	P	27
CO3	Prepare and characterize coordination compounds.	PO 1 PSO 5	A	P	27

PART I

Separation and identification of a mixture of four cations (a mixture of two familiar ions such as Ag^+ , Hg^{2+} , Pb^{2+} , Cu^{2+} , Bi^{2+} , Cd^{2+} , As^{3+} , Sn^{2+} , Sb^{3+} , Fe^{2+} , Fe^{3+} , Al^{3+} , Cr^{3+} , Zn^{2+} , Mn^{2+} , Co^{2+} , Ni^{2+} , Ca^{2+} , Sr^{2+} , Ba^{2+} , Mg^{2+} , Li^+ , Na^+ , K^+ and NH_4^+ and two less familiar metal ions such as Tl, W, Se, Mo, Ce, Th, Ti, Zr, V, U and Li).

Anions which need elimination not to be given. Minimum eight mixtures to be given.

PART II

Colorimetric estimation of Fe, Cu, Ni, Mn, Cr, and NH_4^+ , nitrate and phosphate ions.

PART III

Preparation and characterization complexes using IR, NMR and electronic spectra.

(a) Tris (thiourea)copper(I) complex

(b) Potassium tris (oxalate) aluminate (III).

(c) Hexammine cobalt (III) chloride.

(d) Tetrammine copper (II) sulphate.

(e) Schiff base complexes of various divalent metal ions.

(f) Bis(dimethylglyoximato)nickel(II)

(g) Prussian blue

SEMESTERS I & II**20P2CPHP02 : ORGANIC CHEMISTRY PRACTICAL - I****CREDIT: 3****Contact Lab Hours: 54+54=108**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Carry out different methods of separation and purification of organic compounds.	PO 1 PSO 5	A	P	54
CO2	Apply the methods of separation and purification to organic binary mixtures.	PO 1 PSO 5	A	P	27
CO3	Construct the organic structures and reaction schemes using ChemSketch.	PO 1 PSO 5	A	P	27

PART I

General methods of separation and purification of organic compounds such as:

1. Solvent extraction.
2. Soxhlet extraction of a natural product from its source.
3. Fractional crystallization.
4. TLC and Paper Chromatography
5. Column Chromatography.
6. Membrane Dialysis

PART II

1. Separation of Organic binary mixtures by chemical/physical separation methods.
2. Purification of organic compounds by column chromatography.
3. Record the IR spectrum of simple organic compounds and Identification of the functional groups.

PART III

Drawing the structures of organic molecules and reaction schemes by Chems sketch.

1. Cycloaddition of diene and dienophile (Diels-Alder reaction)
2. Oxidation of primary alcohol to aldehyde and then to acid
3. Benzoin condensation
4. Esterification of simple carboxylic acids
5. Aldol condensation

SEMESTERS I & II

20P2CPHP03 : PHYSICAL CHEMISTRY PRACTICAL-I

Credit: 3

Contact Lab Hours: 72+72 =144

(One question each from both parts A and B will be asked for the examination)

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Illustrate experiments related to adsorption, phase diagrams, distribution law and surface tension.	PO 1 PSO 5	A	P	100
CO2	Apply the methods of computational chemistry to solve different problems of chemistry.	PO 1 PSO 5	A	P	44

Part A**I. Adsorption**

1. Verification of Freundlich and Langmuir adsorption isotherm: charcoal-acetic acid or charcoal-oxalic acid system.
2. Determination of the concentration of the given acid using the isotherms.

II. Phase diagrams

1. Construction of phase diagrams of simple eutectics.
2. Effect of (KCl / succinic acid) on miscibility temperature.
3. Construction of phase diagrams of three component systems with one pair of partially miscible liquids.

III. Distribution law

1. Distribution coefficient of iodine between an organic solvent and water.
2. Distribution coefficient of benzoic acid between benzene and water.
3. Determination of the equilibrium constant of the reaction $KI + I_2 \leftrightarrow KI_3$

IV. Surface tension

1. Determination of the surface tension of a liquid by:
 - a) Drop number method
 - b) Drop weight method
2. Determination of the composition of two liquids by surface tension measurements
3. To determine the critical Micelle concentration of sodium lauryl sulphate

4. Determine the surface excess of amyl alcohol.

Part B

List of Computational Chemistry Experiments

(Second Module of Physical Chemistry Practical -I)

(These experiments are related to the topics in organic chemistry and physical chemistry covered in BSc-MSc Chemistry courses. From the list of experiments we can select the performable experiments depend on the availability of time and suitable computational chemistry software)

1. Geometry optimization and single point energy calculations of simple organic molecules
2. Calculation of energy gap between HOMO and LUMO in simple molecules and visualization of molecular orbitals
3. Calculation of dipole moment in polar organic molecules.
4. Calculation of electrostatic charges of atoms in organic molecules using population analysis
5. Calculation of Resonance energy of aromatic compounds
6. Prediction of the stability of *ortho*, *meta*, *para* products of nitration of aromatic ring using computational chemistry calculations.
7. Calculation of IR stretching frequencies of groups and visualization of normal modes of vibration in organic molecules.
8. Calculation of dimerization energy of carboxylic acids
9. Perform the conformational analysis of butane using potential energy scan
10. Find the transition state of simple organic reactions and plot the reaction profile.
11. Determination of heat of hydration of organic molecules.
12. Find the Gibbs free energy of simple gaseous phase reactions and calculate equilibrium constant.
13. Spectral analysis (UV, IR and NMR) of simple organic molecules.
14. Perform molecular dynamic simulations of smaller molecules in water.
15. Calculation of pK_a of simple organic molecules and compare it with experimental values

16. Docking studies involving protein ligand interactions.

17. Calculation of electrophilicity index in hard-soft acids and bases.

SEMESTER III
20P3CPHT09: Drug Design and Pharmacology

Credit : 4**Contact Lecture Hours: 72**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Explain the fundamental principles of pharmacology.	PO 1 PSO 1	U	C	12
CO2	Describe the concepts of toxicology and biotransformations.	PO 1 PSO 4	U	C	12
CO3	Illustrate the structure, mechanism of action and SAR studies of anti-infective agents, chemotherapeutic agents, drugs acting on CVS, Analgesics, Antipyretic & Anti-inflammatory drugs.	PO 1 PSO 1	U	F	36
CO4	Describe the synthetic studies of different classes of drugs.	PO 1 PSO 1	U	C	12

Unit 1: Pharmacology**(12 Hrs)**

- 1.1 *Drugs and Drug Targets - Enzymes*: active sites, mechanism of catalysis, Enzyme inhibitors, Enzyme selectivity, **Receptors ligand gated ionic channels**, G-Protein coupled receptors, Kinase linked receptors. Carrier Proteins, Structural Proteins, Nucleic acids, Lipids and carbohydrates and DNA as drug targets.
- 1.2 **Structure Activity Relationship - Binding interactions, Functional groups as binding groups, Concept and definition of pharmacophore.**
- 1.3 *Pharmacokinetic Principles*: absorption, distribution, metabolism and excretion of drugs. Dose of drugs and routes of administration. Drug dosing, drug half-life, Steady state concentration, Drug tolerance, Bioavailability, Drug delivery.
- 1.4 **Pharmacodynamic Principles** : Examples of agonists, allosteric modulators, Antagonists, Partial agonists, Inverse agonists, Desensitization and sensitization, Tolerance and dependence, affinity, efficacy and potency.
- 1.5 **Dose response relationships, unusual and adverse responses of drugs, structurally specific and nonspecific drugs. Ferguson's principle.**

Unit 2: Toxicology and Biotransformations (12 Hrs)

- 2.1 Receptor theories and receptor models- rate, occupancy, induced fit, activation-aggregation and molecular perturbation theories
- 2.2 General concepts of toxicity, acute, sub-acute & chronic toxicity tests, teratogenicity & carcinogenicity, LD50, ED50, MIC- anti infectives, habituation & addiction.
- 2.3 **Biotransformations of Drugs, factors affecting biotransformation, site of biotransformations, Effect of biotransformation on the biological activity of drugs, alterations in Phase I biotransformations. Biotransformation - Oxidation, reduction, hydroxylation, hydrolysis - illustrate reactions and mechanism with specific drugs molecules. Phase II biotransformations - glucosidation, sulfation, conjugation with glutathione, acetylation, methylation - illustrate with suitable drug molecules. Chemical and pharmacological roles of Phase I & phase II transformations.**

Unit 3: Anti-infective Agents: (12 Hrs)

- 3.1. **Sulphonamides:** Structure, chemistry, SAR and mechanism of action Sulfadiazine, Sulfamethoxole, Sulfones, Cotrimoxazole (*sulfamethoxole + trimethoprim*), Sulfonamides.
Synthesis: Sulfadiazine, sulfamethoxole, pyrimethamine, Dapsone.
- 3.2. **Antifungal agents:** Study of the drugs - Amphotericin B, Griseofulvin, Nystatin, Ketoconazole, Clotrimazole, fluconazole, 5-Flucytosine.
Synthesis: Griseofulvin, 5-Flucytosine.
- 3.3. **Antiprotozoal agents:** Chemistry, mechanism of action and therapeutic uses of Anti Amoebic and Antihelmintics.
- 3.4. **Antiviral agents:** Antiviral drugs - mode of action and therapeutic uses, Chemistry and mechanism of action of : Amantadine, Ribavirin, Abacavir, Adefovir, Acyclovir, Oseltamivir, Vidarabine, Ganciclovir, Didanosine, Combivir.
Synthesis: Acyclovir, Adefovir, Ganciclovir, Didanosine, Combivir

Unit 4: Drugs acting on CVS (12 Hrs)

Pharmacology and SAR, recent advances of the following classes of drugs

- 4.1 **Cardiotonic Drugs:** Cardiac Glycosides - Digoxin, Digitoxin, Dobutamine and Milrinone.
Synthesis: Milrinone
- 4.2 **Antiarrhythmic Drugs:** Quinidine, Procainamide, Disopyramide, Lidocaine, Phenytoin, Propranolol, Verapamil, Bretylium.
Synthesis: Lidocaine, Phenytoin and Bretylium.

- 4.3 **Antihypertensive Drugs:** Peripheral antiadrenergics - Prazosin and Terazosin, Centrally acting agents - Clonidine and Methyldopa, β -adrenergic blockers - Atenolol and Labetalol. Calcium channel blockers - Nifedipine and Amlodipine. ACE inhibitors - Captopril. Angiotensin receptor blockers - Losartan. Miscellaneous - Thiazide diuretics.
Synthesis: Captopril, Methyldopa, Amlodipine.
- 4.4 **Antianginal Drugs:** Vasodilators - nitrites and nitrates, β -blockers - propranolol. Calcium channel blockers - verapamil and nifedipine. Miscellaneous - Dipyridamol and Aspirin.
Synthesis: Verapamil
- 4.5 **Anticoagulants:** Heparin, Coumarin derivatives and Indanedione derivatives.
- 4.6 **Antihyperlipidemic Agents:** Statins - lovastatin, simvastatin, fluvastatin. Fibrates - clofibrate, and cholestyramine resin, Dicoumarol.
Synthesis: Fluvastatin

Unit 5: Chemotherapeutic Agents

(12 Hrs)

- 5.1 **Antibiotics:** Classification, mechanism of action and therapeutic uses - Penicillin, Cephalosporins, Quinolones, Aminoglycosides, Carbapenems, Macrolide and others. Antibiotic resistance mechanism and implications in therapeutics.
Synthesis: Penicillin V, Cefotaxim, Meropenem, Streptomycin, Ciprofloxacin, Trimethoprim.
- 5.2. **Chemotherapy of Tuberculosis:** First line drugs and second line drugs – Chemistry and pharmacology. The problem of MDR tuberculosis.
Synthesis: Isoniazid, Pyrazinamide, Ethionamide, *p*-Aminosalicylic acid.
- 5.3. **Chemotherapy of Malaria:** Mode of action of the various classes of drugs used, Chemistry, SAR and Drug resistance. Study of the following drugs in the treatment, efficacy, problem of side effects – Quinine sulphate, Chloroquine, primaquine, mephloquine, quinacrine, proguanil, plaquenil. Drug combinations in the therapy of Malarial parasite. Treatment of drug resistant malaria.
Synthesis: Chloroquine, primaquine, proguanil.

Unit 6: Analgesics, Antipyretic & Anti-inflammatory drugs

(12 Hrs)

Mechanism of Action and SAR of:

- 6.1 Different types of analgesia.
- 6.2 **Narcotic Analgesics:** Morphine and codeine, phenyl(ethyl)piperidines, Diphenylheptanones, fentanyl analogues, nalfurafine.
Synthesis: Codeine, Levorphanol, Pethidine and Methadone
- 6.3 **Antipyretics and NSAIDs:** Basic idea of COX I & II Inhibitors, Salicylates – aspirin; *p*-aminophenol derivatives – paracetamol and phenacetin; Pyrazolidine diones – Phenylbutazone; Anthranilic acid derivatives – flufenamic acid; Indoleacetic acid

derivatives – Indomethacin; Arylacetic/propionic acid derivatives - ibuprofen, ketoprofen, flubiprofen and diclofenac; Oxicams – tenoxicam

Synthesis: Phenyl butazone, flufenamic acid, diclofenac, tenoxicam, Ketoprofen

6.4 **Drugs used for Gout** - Allopurinol, Colchicine, Pegloticase

Synthesis: Allopurinol

6.5 **Anti-inflammatory Agents:** Sulindac, Naproxen

Synthesis: Naproxen

6.6 **Novel Analgesics:** Funapide, Raxatrigine (*Structure only*).

6.7 Synthesis of the following drugs-levorphanol, pethidine, methadone, phenyl butazone, flufenamic acid, diclofenac, tenoxicam, allopurinol, Codeine, Ketoprofen, Naproxen.

SEMESTER III
20P3CPHT10 : ORGANIC SYNTHESSES

Credit: 4**Contact Lecture Hours: 72**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the applications of oxidation and reduction techniques in organic syntheses.	PO 1 PSO 2	A	C	18
CO2	Illustrate modern synthetic methods and applications of reagents.	PO 1 PSO 1	U	C	15
CO3	Explain different methods for the construction of carbocyclic and heterocyclic ring systems.	PO 1 PSO 3	U	F	12
CO4	Understand the principles and applications of protecting groups in chemistry.	PO 1 PSO 3	U	C	9
CO5	Apply retrosynthetic analysis to design the synthesis of a target molecule.	PO 1 PSO 3	U	C	9

Unit 1: Organic Synthesis via Oxidation and Reduction**(18 Hrs)**

- 1.1 Survey of organic reagents and reactions in organic chemistry with special reference to oxidation and reduction. Metal based and non-metal based oxidations of (a) alcohols to carbonyls (Chromium, Manganese, aluminium and DMSO based reagents). (b) alkenes to epoxides (peroxides/per acids based)- Sharpless asymmetric epoxidation, Jacobsen epoxidation, Shi epoxidation.(c) alkenes to diols (Manganese and Osmium based)- Prevost reaction and Woodward modification (d) alkenes to carbonyls with bond cleavage (Manganese and lead based, ozonolysis) (e) alkenes to alcohols/carbonyls without bond

cleavage- hydroboration-oxidation, Wacker oxidation, selenium, chromium based allylic oxidation (f) ketones to ester/lactones- Baeyer-Villiger.

- 1.2 (a) Catalytic hydrogenation (Heterogeneous: Palladium/Platinum/Rhodium and Nickel. Homogeneous: Wilkinson). (b) Metal based reductions- Birch reduction, pinacol formation, acyloin formation (c) Hydride transfer reagents from Group III and Group IV in reductions - LiAlH_4 , DIBAL-H, Red-Al, NaBH_4 and NaCNBH_3 , Selectrides, trialkylsilanes and trialkylstannane, Meerwein-Ponndorf-Verley reduction, Baker's yeast.

Unit 2: Modern Synthetic Methods and Reagents

(15 Hrs)

- 2.1 Baylis-Hillman reaction, Henry reaction, Nef reaction, Kulinkovich reaction, Ritter reaction, Sakurai reaction, Tishchenko reaction and Ugi reaction, Noyori reaction. Brook rearrangement, Tebbe olefination. Metal mediated C-C and C-X coupling reactions: Heck, Stille, Suzuki, Suzuki-Miyaura, Negishi and Sonogashira reactions, Nozaki-Hiyama, Buchwald-Hartwig, Ullmann and Glaser coupling reactions. Wohl-Ziegler reaction. Mitsunobu reaction, Michael addition and Reformatsky reactions.
- 2.2 Reagents such as: NBS, DDQ, DCC. Gilman reagent.

Unit 3: Construction of Carbocyclic and Heterocyclic Ring Systems

(12 Hrs)

- 3.1 The synthesis of four, five and six-membered rings- ketene cycloaddition (inter- and intramolecular)- Pauson-Khand reaction, Volhardt reaction, Bergman cyclization, Nazarov cyclization, radical cyclization, Robinson annulation.
- 3.2 Inter-conversion of ring systems (contraction and expansion)-Demjenov reaction, Construction of macrocyclic rings - ring closing metathesis.
- 3.3 Formation of heterocyclic rings: Preparation and structure of the following heterocyclics- aziridine, oxirane, thirane, oxaziridine, azetidine and thietane, 5-membered ring heterocyclic compounds with one or more than 1 hetero atom like N, S or O- Pyrrole, furan, thiophene, imidazole, thiazole and oxazole.

Unit 4: Protecting Group Chemistry

(9 Hrs)

- 4.1 Protection and deprotection of hydroxy, carboxyl, carbonyl, and amino groups. Chemo- and regioselective protection and deprotection. Illustration of protection and deprotection in synthesis.
- 4.2 Protection and deprotection in peptide synthesis: Common protecting groups used in peptide synthesis- Protecting groups used in solution phase and solid phase peptide synthesis (SPPS).
- 4.3 Role of trialkyl silyl group in organic synthesis.

Unit 5: Retrosynthetic Analysis (9 Hrs)

5.1 Basic principles and terminology of retrosynthesis: synthesis of aromatic compounds, one group and two group C-X disconnections; one group C-C and two group C-C disconnections.

5.2 Amine and alkene synthesis: important strategies of retrosynthesis, functional group transposition, important functional group interconversions. Retrosynthesis of luciferin. Functional equivalents and reactivity - Umpolung reaction (*Ireland-Claisen rearrangement*).

Unit 6: Molecular Recognition and Supramolecular Chemistry (9 Hrs.)

6.1 Concept of molecular recognition- host-guest complex formation- Forces involved in molecular recognition.

6.2 Molecular receptors: Cyclodextrins, crown ethers, cryptands, spherands, tweezers, carcerands, cyclophanes, calixarenes.

6.3 Importance of molecular recognition in nucleic acids and protein.

6.4 Applications of supramolecular complexes in medicine- targeted drug delivery.

SEMESTER III

20P3CPHT11 : PHYSICAL CHEMISTRY - III

Credit: 4

Contact Lecture Hours: 72

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSO</i> s	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Apply the principles of chemical kinetics in different types of reactions.	PO 1 PSO 3	U	C	27
CO2	Describe the chemistry of surfaces and its applications in colloids and macromolecules.	PO 1 PSO 1	U	F	27
CO3	Explain the chemistry of crystalline solids	PO 1 PSO 1	U	F	18

Unit 1: Chemical Kinetics**(27 Hrs)**

- 1.1 *Theories of reaction rates*: Collision theory, kinetic theory of collisions, steric factor potential energy surfaces. Conventional transition state theory, thermodynamic formulation of the reaction rate-Eyring equation. Comparison of the two theories. Significance of ΔG^\ddagger , ΔH^\ddagger and ΔS^\ddagger , volume of activation. Effect of pressure and volume on velocity of gas reactions.
- 1.2 *Unimolecular reactions*: Lindemann - Hinshelwood mechanism, qualitative idea of RRKM theory.
- 1.3 *Chain reactions*: Chain initiation processes, steady state treatment, kinetics of H_2-Cl_2 and H_2-Br_2 reactions, Rice-Herzfeld mechanism for decomposition of ethane and acetaldehyde, Goldfinger-Letort-Niclausse rules, branching chains, Semenov- Hinshelwood mechanism of branching chains, upper and lower explosion limits, the H_2-O_2 reaction, kinetics of step growth, free radical, cationic and anionic polymerization reactions.

- 1.1 *Fast reactions*: Relaxation, flow and shock methods, flash photolysis, NMR and ESR methods of studying fast reactions.
- 1.5 *Reactions in solution*: Factors determining reaction rates in solutions, effect of dielectric constant and ionic strength, cage effect, Bronsted-Bjerrum equation, primary and secondary kinetic salt effect.
- 1.6 *Acid-base catalysis*: Specific and general catalysis, Skrabal diagram, Bronsted catalysis law, prototropic and protolytic mechanism with examples, acidity function.
- 1.7 Enzyme catalysis and its mechanism, Michelis-Menten equation, effect of pH and temperature on enzyme catalysis.
- 1.8 Introduction to oscillating chemical reactions: autocatalysis, autocatalytic mechanism of oscillating reactions, the Lotka-Volterra mechanism, the brusselator, the oregonator, bistability.

Unit 2: Surface Chemistry

(27 Hrs)

- 2.1 Different types of surfaces, thermodynamics of surfaces, Gibbs adsorption equation and its verification, surfactants and micelles, surface films, surface pressure and surface potential and their measurements and interpretation.
- 2.2 Application of low energy electron diffraction and photoelectron spectroscopy, ESCA and Auger electron spectroscopy, scanning probe microscopy-AFM and STM, ion scattering, SEM and TEM in the study of surfaces.
- 2.3 Surface Enhanced Raman Scattering, surfaces for SERS studies, chemical enhancement mechanism, surface selection rules, principle and application of SERS in surface chemistry.
- 2.4 *Adsorption*: The Langmuir theory, kinetic and statistical derivation, multilayer adsorption-BET theory, Use of Langmuir and BET isotherms for surface area determination. Application of Langmuir adsorption isotherm in surface catalysed reactions, the Eley-Rideal mechanism and the Langmuir-Hinshelwood mechanism, flash desorption.
- 2.5 *Colloids*: Structure and stability, the electrical double layer, zeta potential, electrokinetic phenomena - sedimentation potential and streaming potential, Donnan membrane equilibrium.
- 2.6 *Macromolecules*: Different averages, methods of molecular mass determination - osmotic, viscosity, sedimentation and light scattering methods.

Unit 3: Crystallography

(18 Hrs)

- 3.1 Miller indices, point groups (derivation not expected), translational symmetry, glide planes and screw axes, space groups, simple cases like triclinic and monoclinic systems, interplanar spacing and method of determining lattice types, reciprocal lattices, methods of characterizing crystal structure, rotating crystal method, powder X-ray diffraction method, determination of structure of sodium chloride by powder method, comparison of the structures of NaCl and KCl, brief outline of single crystal X-ray diffraction and crystal growth techniques.
- 3.2 *Structure factor*: Atomic scattering factor, coordinate expression for structure factor, structure by Fourier synthesis.
- 3.3 *Liquid crystals*: Mesomorphic state, types, examples and application of liquid crystals.

SEMESTER III**20P3CPHT12 : SPECTROSCOPIC METHODS IN CHEMISTRY****Credit: 3****Contact Lecture Hours: 54**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the principles of UV-visible, Chiro-optical, IR, NMR and Mass spectroscopic techniques.	PO 1 PSO 1	U	C	20
CO2	Illustrate various spectroscopic techniques using simple problems.	PO 1 PSO 4	A	C	25
CO3	Elucidate the structure of an unknown organic compound using data from various spectroscopic techniques.	PO 1 PSO 3	U	C	9

Unit 1: Ultraviolet-Visible and Chiro-optical Spectroscopy (9 Hrs)

- 1.1 Energy levels and selection rules, Woodward-Fieser and Fieser-Kuhn rules.
- 1.2 Influence of substituent, ring size and strain on spectral characteristics. Solvent effect, Stereochemical effect, non-conjugated interactions. Chiro-optical properties - RD, CD, octant rule, axial haloketone rule, Cotton effect-applications.
- 1.3 Problems based on the above topics.

Unit 2: Infrared Spectroscopy (9 Hrs)

- 2.1 Fundamental vibrations, characteristic regions of the spectrum (fingerprint and functional group regions), influence of substituent, ring size, hydrogen bonding, vibrational coupling and field effect on frequency, determination of stereochemistry by IR technique.
- 2.2 IR spectra of C=C bonds (olefins and arenes) and C=O bonds.
- 2.3 Problems on spectral interpretation with examples.

Unit 3: Nuclear Magnetic Resonance Spectroscopy (18 Hrs)

- 3.1 Magnetic nuclei with special reference to ^1H and ^{13}C nuclei. Chemical shift and shielding/deshielding, factors affecting chemical shift, relaxation processes, chemical and magnetic non-equivalence, local diamagnetic shielding and magnetic anisotropy. ^1H and ^{13}C NMR scales.
- 3.2 Spin-spin splitting: AX, AX₂, AX₃, A₂X₃, AB, ABC, AMX type coupling, first order and non-first order spectra, Pascal's triangle, coupling constant, mechanism of coupling- Dirac model. Karplus curve, quadrupole broadening and decoupling, homotopic, enantiotopic and diastereotopic protons, virtual coupling, long range coupling. NOE and cross polarization.
- 3.3 Simplification non-first order spectra to first order spectra: shift reagents, spin decoupling and double resonance, off resonance decoupling. Chemical shifts and homonuclear/heteronuclear couplings. Basis of heteronuclear decoupling.
- 3.4 2D NMR and COSY, HOMOCOSY and HETEROCOSY
- 3.5 Polarization transfer, selective population inversion, DEPT., sensitivity enhancement and spectral editing, MRI.
- 3.6 Problems on spectral interpretation with examples

Unit 4: Mass Spectrometry (9 Hrs)

- 4.1 Molecular ion: Ion production methods (EI). Soft ionization methods: SIMS, FAB, CA, MALDI-TOF, PD, field desorption electrospray ionization, fragmentation patterns polyenes, alkyl halides, alcohols, phenols, aldehydes and ketones, esters), nitrogen and ring rules, McLafferty rearrangement and its applications, HRMS, MS-MS, LC-MS, GC-MS.
- 4.2 Problems on spectral interpretation with examples.

Unit 5: Structural Elucidation Using Spectroscopic Techniques (9 Hrs)

- 5.1 Identification of structures of unknown organic compounds based on the data from UV-Vis, IR, ^1H NMR and ^{13}C NMR spectroscopy (HRMS data or Molar mass or molecular formula may be given).
- 5.2 Interpretation of the given UV-Vis, IR and NMR spectra.
- 5.3 Spectral analysis of the following reactions/functional transformations:
1. Pinacol-Pinacolone rearrangement
 2. Benzoin condensation
 3. (4+2) cycloaddition
 4. Beckmann rearrangement
 5. Cis-trans isomerisation of azo compounds

6. Benzil-benzilic acid rearrangement

7. Fries rearrangement

**SEMESTER IV
ELECTIVE COURSES**

20P4CPHT13EL: Biochemistry and Bacteriology

Credit: 4

Contact Lecture Hours: 90

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSO</i> s	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the structure and functions of biomolecules, amino acids, proteins, enzymes, nucleic acids and hormones.	PO 1 PSO 1	U	C	54
CO2	Explain the chemical processes involved in the biological oxidation and metabolism.	PO 1 PSO 4	U	C	18
CO3	Illustrate the application of buffer systems in pharmaceutical chemistry.	PO 1 PSO 1	A	C	6
CO4	Describe the principles of microbiology and immunology	PO 1 PSO 1	U	C	12

Unit 1: Biomolecules an over view

(6 Hrs)

- 1.1 Carbohydrates, proteins, glycoprotein and Lipids and their relevance in Pharmaceutical chemistry.
- 1.2 Structure of cell membrane.

Unit 2: Amino Acids and Proteins

(12 Hrs)

- 2.1 Structural and functional classification of proteins. Structure, Physicochemical properties, configuration and optional properties of amino acids, Purification of proteins and amino acids, sequence determination. Primary, Secondary Tertiary and Quaternary structure of Proteins. Protein folding, three dimensional structure of proteins. Solid phase peptide synthesis.

Unit 3: Enzymes

(18 Hrs)

- 3.1 *Enzymes*: Classification, Mechanism of enzymatic reactions, kinetics of enzymatic reactions, Michaelis Menton model, Measurement of significance of K_{max} and V_{max} perfect enzymes. Inhibition of enzymatic reactions. Kinetics of competitive and non-competitive Inhibition. Allosteric enzymes, Mechanism of enzymatic catalysis by Lysozyme and carboxypeptidase, Zymogens.
- 3.2 *Coenzymes*: Classification, Structure and Function of Nicotinamide adenine dinucleotides (NAD and NADP), Riboflavin Nucleotides (FMN and FAD), Biological oxidation and reduction, Lipoic acid, Cytochromes, Pyridoxal phosphate, Nucleoside diphosphates. Tetrahydrofolic acid conjugates, Biotinyl coenzyme. Conenzyme - A, and Thiamine pyrophosphate.
- 3.3 *Biotechnological Application of Enzymes*: Application of immobilized enzymes, use of enzymes as targets for drug design. Clinical uses of enzyme therapy, Enzymes and recombinant DNA technology. Genomic Library.

Unit 4: Nucleic acids and Hormones

(18 Hrs)

- 4.1 *Nucleic acids*: Nucleoid bases, Nucleosides, nucleotides, structure of DNA, RNA and its classifications, Replication of DNA, transcription, translation and Protein Biosynthesis. DNA finger printing Techniques, Introduction to Recombinant DNA technology. Genetic code, gene therapy (*basic concept only*), PCR. Chemical Synthesis of Nucleotides, Restriction enzymes. Chemistry of ATP, ADP and AMP.
- 4.2 *Hormones*: Functions and mode of action of hormones, Pituitary, thyroid, parathyroid, adrenal and adrenocorticoid and pancreatic hormones. Male and female sex hormones. Anti-hormones.

Unit 5: Biological Oxidation and Metabolism:

(18 Hrs)

- 5.1 *Carbohydrate Metabolism*: Carbohydrate the source of energy, glycolysis, glycogenesis, pentose pathway, citric acid and Cori cycle. Regulation of carbohydrate metabolism, Hormonal regulation of carbohydrate metabolism. Fructose and Galactose metabolism. Diabetes-Type I & II.
- 5.2 *Lipid Metabolism*: Oxidation of fatty acid, biosynthesis of fatty acids, Prostaglandins-classification, structure and biosynthesis and biological role.
- 5.3 *Protein and Amino Acid Metabolism*: Oxidative deamination and transamination reactions, Urea formation- ornithine cycle.

Unit 6: Buffer Systems

(6 Hrs)

- 6.1 Buffer in pharmaceutical and biological system, pH, the buffer equation (Henderson Hesselbach), Buffer calculations, three important buffer systems in human body, buffer capacity, osmotic pressure and tonicity, pharmaceutical buffers, preparations of pharmaceutical buffer solutions.

Unit 7: Microbiology and Immunology

(12 Hrs)

- 7.1 **Microbial Drug Development:** Introduction to Microbiology and classification of Microbes. Characterization and Screening of Microbes: Microbial growth, kinetics, Isolation and Improvement of Individual micro-organism, Fermentation technology: Design, operation and characteristics of fermentation processes. Staining of bacteria, theories of staining. General principles of microbial control - sterilization and disinfection.
- 7.2 **Immunochemistry in pharmaceutical applications:** Overview of the immune system and its role, Adaptive and innate Immunity. Immunoglobulins - classification and structure, their biological role. Immune response and the underlying mechanisms, Regulation of immune response. Hypersensitivity, immunodeficiency, Autoimmunity, Immunization, Immunosuppressants, Immunomodulators, Immunological techniques

SEMESTER IV**20P4CPHT14EL: Advances in Pharmaceutical Operations****Credit 4****Contact lecture Hours: 90**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Describe the drug delivery systems and pharmaceutical dosage forms.	PO 1 PSO 1	U	C	28
CO2	Explain preformulation studies and stability testing of drugs.	PO 1 PSO 4	R	F	10
CO3	Illustrate the application of colloids and chromatography in pharmaceutical chemistry.	PO 1 PSO 1	A	C	24
CO4	Describe the principles of forensic pharmacy.	PO 1 PSO 1	R	F	14
CO5	Explain different methods of extraction and application of radiopharmaceuticals.	PO 1 PSO 1	R	C	14

Unit 1: Pharmaceutical Dosage forms and Drug delivery Systems**(10 Hrs)**

- 1.1 An over view of different dosage forms drug delivery systems- liposomes and nanoparticle drug delivery system, biodegradable drug delivery system, controlled release system, targeted drug delivery systems, hydrogel bases drug delivery systems,

Unit 2: Formulation and Development of solid dosage forms**(18 Hrs)**

- 2.1 New materials, excipients science - diluents, disintegrants, super disintegrants. Evaluation of functional properties of excipients, co-processed materials, methods of preparation and evaluation. Coating, coating machines, coating techniques advanced coating technologies in tablet technology for product development

Specialized tablets: Formulation and evaluation of effervescent, or dispersible and chewable tablets. Formulation and manufacture of powder dosage forms for internal use. Soft and hard gelatine capsules advances in capsule manufacture, machines, processing and control. Filling equipment and filling operations, formulations, finishing, special techniques.

- 2.2 **Disintegration:** Disintegration, Disintegration time, factors affecting disintegration, disintegration testing of tablets.

- 2.3 **Dissolution:** Theories of Dissolution, dissolution models, Factors affecting dissolution rates, dissolution of different dosage forms- solids, suspensions, suppositories, controlled drug release systems.

- 2.4 **Micrometrics-** Introduction, Pharmaceutical importance, particle size distribution, surface area and particle volume derived properties of powder, flow properties of powder and application in pharmacy, Different methods in particle size determination.

Unit 3: Preformulation studies and Stability Testing (10 Hrs)

- 3.1 **Preformulation studies:** Factors affecting dissolution, bioavailability and drug absorption – pH, pka values, Partition coefficient, particle size, solubility etc. Methods to increase solubility of poorly soluble drugs. Drug release mechanisms.
- 3.2 **Stability testing:** Drugs and dosage forms: Solid state drug stability, dosage form stability, accelerated stability testing, shelf life calculations, strategies for prolonging shelf life. Effect of packaging materials on dosage form stability. Photostability testing and oxidative stability, role of containers in stability testing.

Unit 4: Colloids (10 Hrs)

- 4.1 Pharmaceutical application of colloids, brief introduction to properties of colloids. Coarse dispersions: Physical stability of suspension and emulsions, types of suspension, controlled flocculation-flocculated suspension, types of emulsion, theories of emulsification, emulsifying agents mechanism of action, factors to improve physical stability of emulsions.

Unit 5: Forensic pharmacy (14 Hrs)

- 5.1 Getting the drug to the market- Preclinical studies of toxicology, drug metabolism pharmacology, formulation and stability tests and Clinical trials
- 5.2 **IPR: Patents:** Conditions for patentable inventions, Patentable inventions under the patent Act 1970, Types of inventions not patentable in India, Term of patent in Indian System, Essential patent documents to be submitted, Provisional specification and complete specification, Criteria for naming inventors patent
- 5.3 Copyright Entitlement to copyright, works protected by copyright, Rights granted by copyright, Geographical indication
- 5.4 BP, IP, USP, Limits Tests

Unit 6: Chromatography (14 Hrs)

- 6.1 Applications of chromatography as an analytical and diagnostic tool in pharmaceutical chemistry-over view of plate and rate theories, different classification of chromatography,-adsorption, partition, size exclusion (GPC), Affinity, Ion exchange. Applications of PC, TLC, GC& different detectors, GCMSS, Column chromatography,

HPLC. Normal and reverse phase, chiral Columns, LCMS and its applications in pharmaceutical chemistry.

Unit 7: Modern Techniques of Extraction and Radio Pharmaceuticals (14 Hrs)

- 7.1 Radio Pharmaceuticals and their applications in diagnosis and treatment, Diagnostics techniques- ELISA, RIA, PET, SPET
- 7.2. Principles and methods of Industrial extraction, evaporation and distillation, ultracentrifugation, electrophoresis.

SEMESTER IV
20P4CPHT15EL: Drug Design and Medicinal Chemistry

Credit: 4

Contact Hours: 90 Hours

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Explain the principles of drug design and development, QSAR, CADD and combinatorial chemistry.	PO 1 PSO 1	U	C	46
CO2	Illustrate the structure and mechanism of actions of antineoplastic drugs, drugs acting on ANS and drug acting on CNS.	PO 1 PSO 4	U	C	34
CO3	Explain the synthetic studies of different classes of drugs.	PO 1 PSO 1	A	C	10

Unit 1: Drug Design and Development**(14 Hrs)**

- 1.1 Development of new drugs, procedures followed in drug design.
- 1.2 Concept of lead compounds and lead modification & lead optimization - phytochemicals as lead compounds.
- 1.3 Prodrugs and soft drugs. Functions and properties of prodrugs and its effect and significance with relation to pharmacological activity.
- 1.4 Endogenous compounds as drugs- neurotransmitters, natural hormones.
- 1.5 Peptidomimetics in drug design.
- 1.6 SAR, factors affecting bioavailability, resonance and inductive effects, isosterism, bioisosterism.

Unit 2: QSAR**(12 Hrs)**

- 2.1 Introduction and perspectives and parameters involved in studies of QSAR
- 2.2 Types of QSAR models
- 2.3 Classification of parameters utilized in QSAR studies
- 2.4 Statistical concept of QSAR
- 2.5 Hansch model of QSAR
- 2.6 De Novo model of QSAR

2.7 Hammett and Taft model of QSAR equations

2.8 Applications of QSAR in drug design

Unit 3: Computer Aided Drug Design (CADD) (10 Hrs)

3.1 Introduction to drug discovery -Target and Lead Identification -Virtual screening-concept, Ligand based and structure based. Drug Likeness – ADME, Pharmacophore Screening

3.2 Molecular modeling- Quantum mechanics and Molecular mechanics, Docking studies, Pharmacokinetics and Pharmacodynamics. Advantages of CADD.

Unit 4: Combinatorial Chemistry (10 Hrs)

4.1 Introduction

4.2 Combinatorial approaches

4.3 Peptide and small molecule libraries

4.4 Applications, methodology

4.5 Combinatorial Organic Synthesis

4.6 Assays and Screening of Combinatorial libraries

4.7 Introduction to High Throughputs Screening (HTS)

Unit 5: Antineoplastic Drugs (12 Hrs)

5.1 Cancer chemotherapy

5.2 Role of alkylating agents, antimetabolites and folate antagonists in the treatment of cancer. Carcinolytic antibiotics and mitotic inhibitors.

5.3 Plant derived drugs - vincristine, taxol

5.4 Hormones and their antagonists.

5.5 Recent developments in cancer chemotherapy-immunological interventions

5.6 Synthesis of 5-fluorouracil, 6-mercaptopurine, methotrexate, tamoxifen.

Unit 6: Drugs acting on ANS (14 Hrs)

6.1 Introduction to autonomic nervous system and classification.

Mechanism of action and uses of the following classes of drugs:

- 6.2 **Adrenergic agonists** : Clonidine, oxymetazoline, salbutamol. Adrenergic blockers: α and β adrenoreceptor antagonists-ergot alkaloids - Pronethalol, propranolol, atenolol, metoprolol, pindolo.
- 6.3 **Cholinergic stimulants**: nicotinic and muscarinic receptors, acetyl choline, pilocarpine and carbachol.
- 6.4 **Cholinergic blockers**: atropine, hyoscine
- 6.5 **Nicotinic antagonists**: Decamethonium and suxamethonium
- 6.6 **Anti-cholinesterases**: Competitive inhibitors-physostigmine and neostigmine. Organo phosphorous compounds and nerve gases.
- 6.7 Synthesis of: Salbutamol, methoxamine, Clonidine, terbutaline, Phentolamine, Phenoxybenzamine, Metoprolol , butoxamine, carbachol, nicotine, atropine

Unit 7: Drugs acting on CNS: pharmacology of the following classes of drugs (18 Hrs)

- 7.1 Hypnotics, sedatives and anxiolytic agents.
- 7.2 **Anxiolytic agents** : Benzodiazepines, buspirone and meprobamate.
- 7.3 **Anticonvulsants**: Convulsions, types of epilepsy, barbiturates - hydantoins, oxazolidinediones, succinimides and benzodiazepines.
- 7.4 **Analeptics**: Xanthines, amphetamines, nikethamide and ethamivan.
- 7.5 **Centrally acting muscle relaxants**: Glyceryl ethers - mephenesin, alkane diol derivatives-meprobamate, benzodiazepines-librium, diazepam and baclofen.
- 7.6 **Anti-parkinson's agents**: Dopamine agonists, dopamine releasing agents and synthetic anticholinergics.
- 7.7 **Drugs for Alzheimer's disease**: Cholinergic agonists and acetylcholine esterase inhibitors.
- 7.8. Synthesis and uses of the following drugs - Enflurane, Etomidate, Phenobarbital, Diazepam, Chlordiazepoxide, Meprobamate, Nikethamide, Ethamivan, Ethosuximide, Denzimol, Topiramate, Levodopa, and Tacrine. Diphenhydramine

SEMESTERS III and IV
20P4CPHP04: Pharmaceutical Analysis Practical

Credit : 3**Contact Lab Hours: 54 + 54 = 108**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSOs</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Prepare different classes of drugs.	PO 1 PSO 5	A	P	54
CO2	Analyse drugs using common analytical techniques.	PO 1 PSO 5	A	P	27
CO3	Determine pKa values of drugs	PO 1 PSO 5	A	P	27

- Preparation, assay including limit tests** prescribed in the IP/BP of the following drugs: sodium salicylate, calcium lactate, yellow mercuric oxide, ferrous fumarate, ferric ammonium citrate, potassium antimony citrate, boric acid, light magnesium carbonate, and sodium citrate. Expectorants and emetics (NH₄Cl, antimony potassium tartarate), Respiratory Stimulants (NH₄)₂CO₃, Dental products (Dicalcium Phosphate, Sodium Fluoride) Gastrointestinal agents: MgSO₄
- Assay, test for identity and purity of the following synthetic drugs: Aspirin, Paracetamol, Ibuprofen, hexamine, Boric acid, Ferrous Fumarate, Isoniacid, Calcium lactate, Calcium gluconate.
- Analysis of official drugs using common analytical techniques (*separation of excipients from tablets and Assay using spectrophotometer*).
- Assay of Antibiotics.
- Assay of Vitamins: ascorbic acid, acetomenaphthone, niacinamide, pyridoxine and thiamine.
- Determination of pKa values of drug molecules.
- Determination of pKa values at different pH conditions

SEMESTERS III and IV
20P4CPHP05: Drug Synthesis Practical

Credit : 3

Contact Lab Hours: 54 + 54 = 108

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSO's</i>	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Synthesize typical organic medical compounds.	PO 1 PSO 5	A	P	54
CO2	Perform extraction and TLC analysis of plant extracts.	PO 1 PSO 5	A	P	27
CO3	Isolate natural products from their sources.	PO 1 PSO 5	A	P	27

1. Synthesis of some typical organic medicinal compounds, spectral illustration of the intermediates and products formed: paracetamol, sulphanilamide, hippuran, benzocaine, clofibrate, mercurochrome, phenytoin, dapsone, sulphasalazin, antipyrine, aminacrine and phenobarbitone.
2. Preparation of some specified crude plant extracts and qualitative analysis by TLC of crude plant extracts/ products to detect the presence of phytochemicals.
3. Isolation of phytochemicals from their natural sources.
Examples Caffeine from Tea, Nicotine from tobacco, Curcumin from turmeric, Tannins from Gallnuts, Lycopene from tomato
4. Qualitative analysis of barbiturates, lactates, tartarates and alkaloids.
5. Limit tests.

SEMESTERS III and IV**20P4CPHP06: Biochemistry and Bacteriology Practical****Credit : 3****Contact Lab Hours: 72 + 72 = 144**

After completing the course, the students will be able to:

	<i>Course Outcome</i>	<i>POs / PSO</i> s	<i>CL</i>	<i>KC</i>	<i>Class Sessions</i>
CO1	Analyse blood and urine samples.	PO 1 PSO 5	A	P	54
CO2	Estimate the amino acids by titration methods.	PO 1 PSO 5	A	P	27
CO3	Identify amino acids and peptides by PC and TLC	PO 1 PSO 5	A	P	27
CO4	Separate serum proteins by paper electrophoresis	PO 1 PSO 5	A	P	36

A. Biochemistry

1. Blood Analysis

- a. Determination of blood group and Rh factor.
- b. Enumeration of RBC, WBC and differential leucocyte count.
- c. Determination of ESR.
- d. Estimation of urea, uric acid, cholesterol, creatinine, haemoglobin and calcium.

2. Urine Analysis

- a. Qualitative analysis of urine for the common pathological constituents - sugar, albumin, ketone bodies, bile.
- b. Estimation of albumin, ketone bodies, sugar and urea.

3. Quantitative Estimation of Amino acids by formol titration and direct titration.

4. Identification of Amino acids and peptides by PC and TLC and Colour reactions

5. Separation of serum proteins by paper electrophoresis.

B. Bacteriology

1. Preparation of some typical nutrient media for collection and isolation of bacteria.

- a. Nutrient Agar, Endo's Agar, Chapman's Agar, Tergitol-7 Agar and McConkey Agar.

2. Staining and the study of the morphology of the bacteria.

a. Simple stain

b. Gram stain (Hoker method)

c. Capsule stain

d. Acid fast stain (Ziehl- Neelson)

e. Negative stain (India ink method)

3. Identification of some common pathogenic organisms.

4. Enumeration of bacteria in milk-the reductase test.

5. Evaluation of germicides-Riedel Walker test.

6. Antibiotic sensitivity tests.

20P4CPHCV - Comprehensive Viva Voce

There will be a comprehensive viva at the end of the programme. The viva board consists of two external examiners preferably same as the practical examiners for the respective subject and one internal examiner (Class teacher).

20P4CPHPJ - Project

Each student should submit a project report for evaluation. A minimum of 3 months period shall be given to each student for the project and this may be after the end semester examination of semester 4. Students can do their project in the department or any other reputed research institution in and outside the state. After completing the project the report should be submitted to the department for internal and external evaluation. The external evaluation will be done by the project viva board, which consists of two examiners preferably same as the practical examiners.

,
