

Radio Production Planning

Module Number: 03

Understanding Sound Bites

What is a sound bite?

A brief **snippet** of recorded speech or sound usually cut from a **larger file**.

What is a sound bite?

- 🎤 They are used to break the monotony of the program.
- 🎤 A program is filled with facts so the sound bite **supports fact with motion.**
- 🎤 It brings out the true **emotion of the story.**
- 🎤 Sound bytes should be **SHORT!** (Not more than 20sec.)

Types of programs which use sound bites >>>

 ANNOUNCEMENTS 

 RADIO TALK/SPEECH 

 RADIO INTERVIEWS 

Sound bytes are taken from interviews

 RADIO DISCUSSIONS

Types of programs which use sound bites >>>

Using sound bites

- Commonly used in news programs/new reports.
- Also used in documentaries/features, magazine programs.
- Can be used in studio discussions too.
(An archive file can be played back as a reference in a discussion.)
- **In commercials.** (A sound bite of a celebrity can be used to sell/promote something).

Types of sound bites

- A clip from an **exclusive interview**.
- A recording from a **press conference** or public gathering.
- Audio extracted from a **video**.
(if the video is copyright protected then can still be done for non-commercial use.)
- **Live** recorded material from a **location**. (voices, sounds, noises, music etc.)

Types of sound bites

Sound bites in a news bulletin...

Listen and name 2 types of sound bites.

How to pick a good sound bite

- 🎙️ **Clean sound:** Pick a clip that is noise-free.
- 🎙️ **Relevance:** Is the clip relevant to your program?
- 🎙️ **Ethical editing:** Don't edit the file in such a way that it misrepresents what the person is saying.

CLEAN SOUND

🎤 **NOISE:** Any unwanted sound that gets picked up in a recording.

Eg: Live recordings from events and outdoor locations tend to have noise.

🎤 Every recording device has its own noise. *Varies for each recording device.*

🎤 **Signal to noise ratio (SNR or S/N)** is the ratio between the actual sound that is desired and the unwanted noise in a recording.

CLEAN SOUND

🎙️ **White noise:** Any continuous unchanging sound that is present in the recording but has no relevance to the story.

- Eg: The sound of the fan, AC etc.

🎙️ **HISS sound** in the background of your recording.

- Most audio editing software have HISS reduction options.

CLEAN SOUND

- 🎙️ **Wind:** Another big issue in recording is wind noise which can potentially destroy a recording.
- 🔒 In most cases, the sound of the wind is accentuated (sounds amplified) when it is recorded.
- 🔒 Best practice to avoid wind interference is to ensure the mic is not against the wind or that there is a windscreen.

CLEAN SOUND

- *Clipping* occurs when sound is recorded at a level that's too high, or too "hot."
- When sound clips, the result is noticeable **distortion**.
- Always make sure sound is recorded in a safe range.

CLEAN SOUND

🎧 Let's listen to an interview with clean sound:

Interviewer: Aswin Manikandan | Interviewee: Jinu Joseph | Show: The Talk

CLEAN SOUND

🎙️ One more interview with clean sound barring few clipping noises:

Interviewer: John Johnson | Interviewee: Jacob Peter | Show: Humans of SH

Remember: This is a raw file. No edits. Post edit all the brushing sounds can be cleaned up too!

MONITOR SOUND LEVELS

🎧 LISTEN WHILE RECORDING:

It's crucial to check audio while recording using headphones to track how things sound.

🎧 **PLAYBACK:** If possible break recording to review sound quality.

MONITOR SOUND LEVELS

- 🎙 It's hard to catch every problem even if you are monitoring. So **playback helps you focus** on the recording quality.
- 🎙 Proper monitoring will reveal most audio problems listed above and offers **a chance to fix things before it's too late** in the studio, when the best that can be hoped for is usually a patch.

RELEVANCE & ETHICAL EDITING

- 🎙️ Relevance: Using a sound bite when and where it makes sense and not for the sake of having a sound bite.
- 🎙️ Ethical editing is cutting a sound bite without changing its meaning...

Interviewer: Tom Shibu

Interviewee: Muhammad Adil

Interview Topic: Power of Punctuality: Coming to class on time

RELEVANCE & ETHICAL EDITING

🎙️ Was this file cut ethically?

Interviewer: Tom Shibu

Interviewee: Muhammad Adil

Interview Topic: Adil's Journey with Cricket

RELEVANCE & ETHICAL EDITING

- Edit out certain words or sentences to change the meaning.
- Use a clip out of context to emphasize a point which the person did not intend to make.

- Cut out unnecessary detail.
- Rearrange the order of the answers without changing the meaning.
- Get a patch work done for live sound that you couldn't pick up correctly.

- Adobe Audition: Paid
- Pro Tools: Paid
- Audacity: Free
