Courses Details

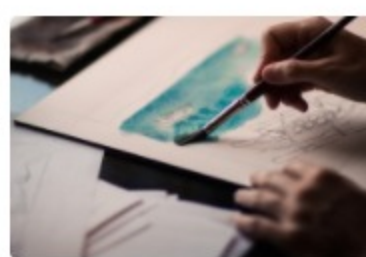

Aquariculture, Aquaculture economics, Management and administration

Started on: Wednesday, 8 July 2020

Module I and II of this course 'Aquariculture, aquaculture economics, management and administration' gives an idea about ornamental fishes and accessories, their breeding and farming. This also teaches how to construct glass aquarium tanks and aquarium maintenance, various types of filters that can be used in hatcheries and aquariums. Information about the breeding of both fresh water and marine ornamental fishes is taught. Topics on the live feed culture and common diseases of aquarium fishes and their management are also dealt in detail. Module III of this course consists of the application of production economics and cost fractions that determines the maximum profit level of production, opportunity costs etc. are given. Module IV contains aquaculture management including material management, personnel management and water quality management of hatcheries and farms. This is a skill development course which gives the students the skill of aquarium construction, aquarium setting, management and fish breeding, larval production and rearing. This course is done with the view to "Earn while you learn" so that the students are able to procure some earnings from the skill they are learning from the course. After this course, the students are equipped to start small hatchery or farm in their back yard home and earn by themselves.
