Courses **Details**

Mathematical Analysis

Started on: Sunday, 29 July 2018

Mathematical analysis is one of the most important and welldeveloped strands of pure mathematics with many elegant and beautiful theorems, and also with applications to many areas of mathematics, theoretical statistics, econometrics, and optimisation. The aim is to introduce students to the ideas of formal definitions and rigorous proofs (one of the fundamental features of modern mathematics, and something that is not familiar from A-level), and to develop their powers of logical thinking.
